

DATA SHEET JULY 2018

## **VELLEMAN WATCH KIT**

**ORDER CODE: K1200** 

Isn't it about time you made your own electronic watch!?

Make a statement with this neat looking DIY watch that fits everyone's wrist.

The most difficult SMD components are pre-soldered but the rest of the soldering fun is up to you.

The watch is Arduino based and pre-programmed with an addictive reflex game and of course with a basic time view. These functions are triggered by pressing the single multipurpose button and is displayed by using the 24 amber coloured LEDs. Then again, you can easily re-program it to your liking by using the custom cradle (K1201) or a USB to UART module. Don't worry about the programming difficulty because you can base your own code on the open-source Arduino library. So feel

free to experiment with different time views or invent your own

WEARABLE &
ARDUINO COMPATIBLE
WATCH!

The watch comes with a stylish black fabric woven wrist band and closes by means of a silver coloured buckle. Also, the watch only has a diameter of 35 mm and a height of 9.6 mm so it's ideal for both large and small wrists!

If you do not become overly addicted to the reflex game, the battery should last around 2 years. But remember, time flies when you're having fun!

## **FEATURES**

game!

- Arduino based
- · 24 amber coloured LEDs
- single multipurpose button
- black wristband included
- pre-programmed reflex game and time view
- easily re-programmable (by using the K1201 cradle for Velleman watch or a USB to UART module)
- · Arduino library available
- open-source

## **SPECIFICATIONS**

CPU: ATMega328p

• RTC: PCF8523TS

stand-by current consumption: 2 μA

battery: CR2032 (not incl.)

• battery life: 2 years (normal use)

diameter: 35 mm

· wrist band width: 18 mm

wrist band material: synthetic black fabric

· wrist band closing: steel buckle

· height: 9.6 mm
