## Description

Akyga® AK-CA-47 is a herring designed for mounting in the back of ATX computer cases, containing two USB 3.0 ports, specially adapted for users with motherboards with a USB 3.0 port in the form of pins. The kit allows you to output ports for easier and more convenient connection of devices.

In order to extend the board's functionality by two additional USB 3.0 ports, make sure that the motherboard is compatible with the 20-pin connector, and then you can just mount the panel in the free bay of the computer case.

USB 3.0 ports are useful for fast file transfers and powering devices, as well as for connecting peripherals such as a mouse or keyboard. Compared to previous solutions, the 3.0 standard allows up to 10 times faster data transmission speed.
