- a programmable BIN input for changing the operating mode of the controller: start/stop regulation, set value interlock
- 1 control output, relay or SSR control output, ON-OFF with hysteresis, PID AUTOTUNING PID
- automatic selection of PID parameters function
- LED display with adjustable brightness control
- line resistance compensation for resistive sensors
- temperature compensation of cold ends of thermocouples
- programmable input type, digital filtration, regulation and access options and other configuration parameters
- access to configuration parameters protected by a user's password
- methods to parameters configuration:
 - from the foil keyboard and tuning knob (encoder) located on the front panel of the device
 - via PRG port (AR955/AR956 programmer) and the free ARSOFT-CFG program (Windows 7/8/10)
- software and programmer enabling the preview of the measured value and fast configuration of single or ready parameter sets previously stored in the computer for the purpose re-use, for example in other controllers of the same type (duplication of configuration)
- panel housings, IP40 from the front, IP20 from the connectors
- high accuracy, long-term stability and resistance to noise
- wide supply voltage range: 15 ÷ 250 Vac (alternating voltage 50/60 Hz), 20 ÷ 350 Vdc (direct voltage)
