Smart temperature monitoring relays

Set up these innovative temperature monitoring relays exactly as you need, either via a back-lit LCD or smartphone app. Parametrization and configuration are just one touch away with the ABB EPiC app – even in a non-powered state – reducing installation time by 80%.

Just one relay covers a wide range of applications, enables you to monitor their condition and provides thermal protection. Increased uptime and safety makes ABB's Smart monitoring relays a true game changer.

Smart monitoring relays
Table of contents

One look, one touch – one device
Features and benefits

Set up these innovative temperature monitoring relays exactly as you need, either via a back-lit LCD or smartphone app. Parametrization and configuration are just one touch away with the ABB EPiC app – even in a non-powered state – reducing installation time by 80%. And with just one relay covering a wide range of application, stocks can be reduced significantly, making ABB's Smart monitoring relays a true game changer.

Easy to install

One look - back-lit LCD for easy reading and parametrization
Everything you need at a glance: the LCD at the front of the relay shows the currently measured values and maintenance data. And with just one push, the symbol-based menu structure can be accessed via the push-rotate button. Simply set the thresholds and parameters with the help of an intuitive and future-ready interface.

Optimum interface

One touch - NFC parametrization via smartphone app
One touch is all that is needed for fast, easy and intuitive configuration with the ABB EPiC smart-phone app. Simply touch the relay with your mobile phone: Parameter settings can be edited and stored in the app and then copied to different devices, even if they are not in the powered state. Available in a range of different languages, installation and configuration have never been so easy.

Continuous operation

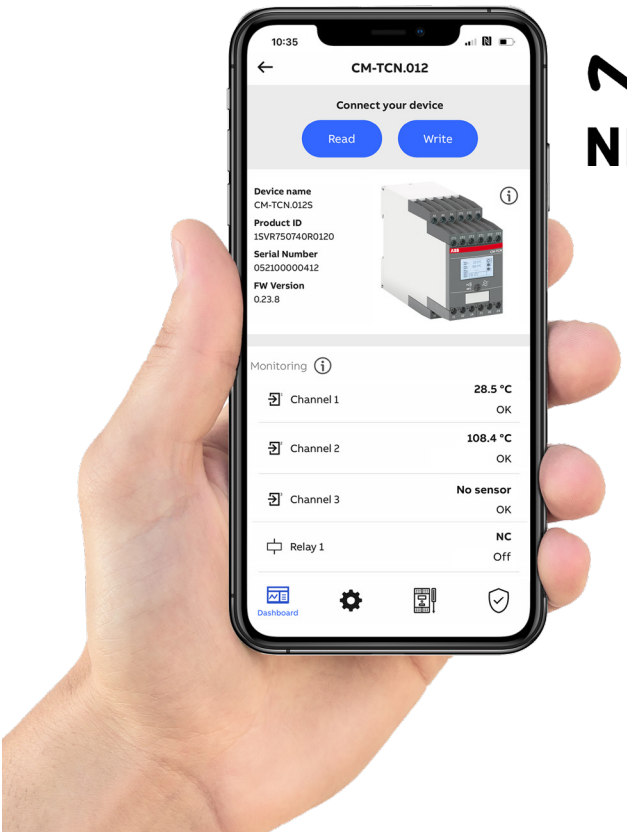
One device - for thermal protection and condition monitoring
Smart temperature monitoring relays ensure that your application remains operational by detecting potential failures in advance. They protect the life of your assets by providing early detection of unacceptable temperature rises and the need for maintenance. The relay is configurable over a wide range of settings and can be adjusted flexibly. Set a pre-alarm and alarm thresholds according to application needs. Increase personal safety by monitoring temperature remotely with Modbus RTU or ABB Ability™ Energy and Asset Manager.

Smart temperature monitoring relays
Setup via display or smartphone app

CM-TCN temperature monitoring relays can measure temperatures of solids, liquids and gaseous media in up to three sensor circuits using various types of sensors.

One...

look **to have the information needed**
the display shows the measured values and relay status at a glance. The symbol-based menu structure and presettings make parametrization simple.



NFC

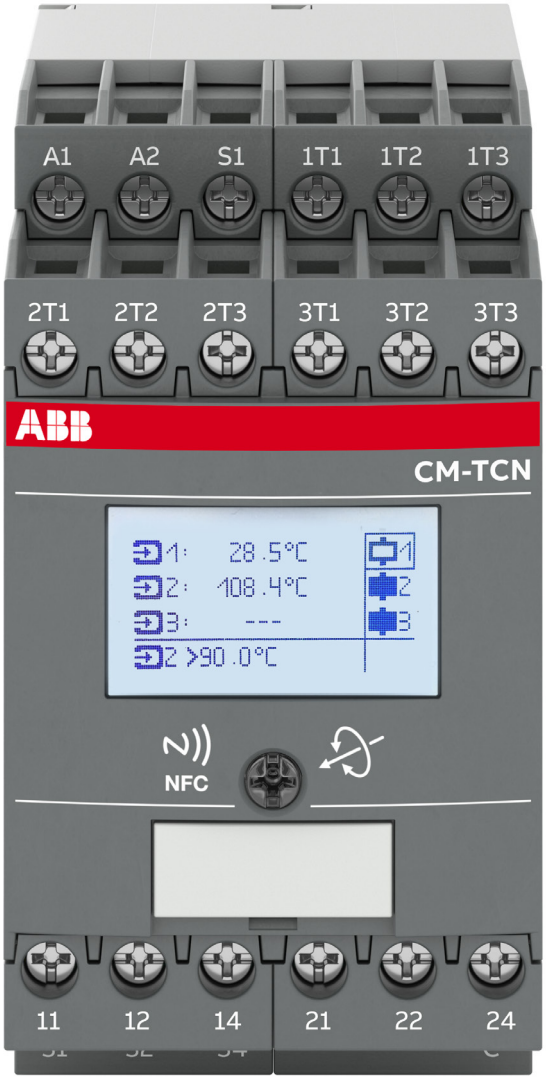
touch **for up to 80% faster setup**
for easy parametrization and copying of settings between multiple devices via NFC with the ABB EPiC smartphone app – even if the relay is not powered.

device **for thermal protection and condition monitoring**
Just one relay to cover many different applications, monitor their condition, increase safety and ensure uptime.

One look - back-lit LCD

Easy reading and setup with one push

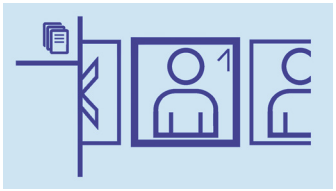
Just one look is all it takes to see the status and measured values of the relay, easily navigate through the symbol-based menu and even configure the device with the new, back-lit LCD at the front of the relay.



Start screen
Know the status at one glance.

Symbol-based menu structure
Due to the symbol-based menu structure, there is no need for any translation, which helps avoid misunderstandings and dramatically increases efficiency in after sales support.

Pre- and user-defined settings
For frequently used applications, the device offers predefined settings to save installation time. Parameters can be individually set and saved in one of four user settings.



Push-rotate adjustment
Adjust the relay with a simple screw driver by pushing and rotating the potentiometer to navigate through the menu.

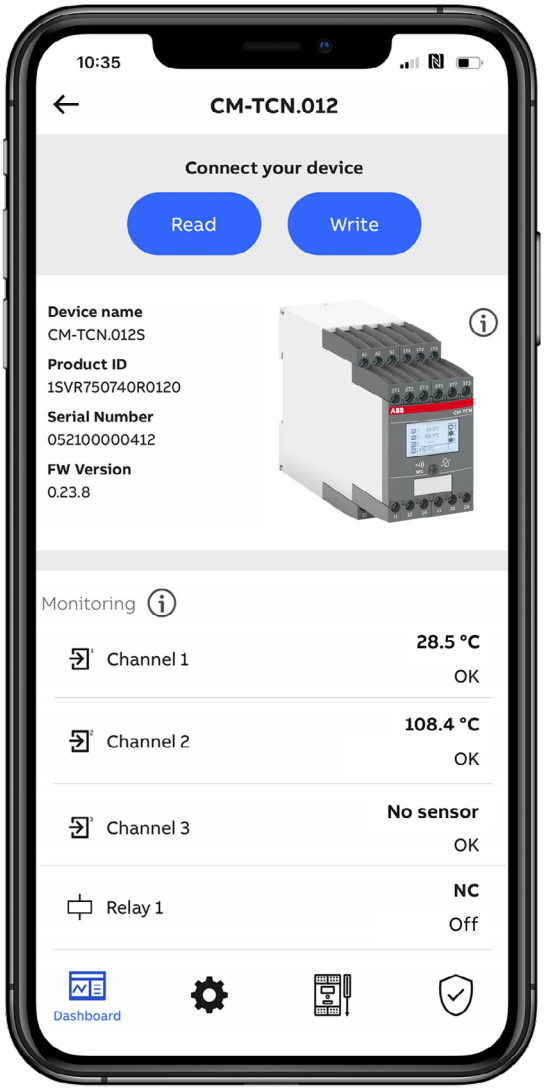
Back-lit LCD
The back-lit LCD at the front of the relay shows the currently measured values and maintenance data and makes setup easy.

Diagnostic data
Event history, operating hours counter, statistics and others are easily accessible from the menu

Password & parameter log
Improved security is achieved through the recorded password and parameter log.

One touch - setup via smartphone app
Powerless configuration with NFC

Configuration and parametrization of temperature monitoring relays has never been simpler. One touch is all that is needed for fast, easy and intuitive configuration with the ABB EPiC mobile phone app.



Near Field Communication (NFC)
NFC is an international transmission standard based on radio-frequency identification technology for the contact-less exchange of data.This technology is already integrated into most electronic devices like tablets and smartphones and part of everyday life, e.g. for contactless payment.

ABB EPiC smartphone app
Electrification Products intuitive Configurator (EPiC) is a mobile application that makes it possible to configure and check the status of ABB low voltage products. The app is available for free - just download it and connect to your smart monitoring relays, circuit breakers and other devices.

Easy visualization
Monitor the status of the relay and read the measured values in the app.

Store and send parameters
Store a set of parameters in the app and distribute them globally and copy them to other devices.

Powerless adjustment
Parametrize and configure the relays even while not connected to a power supply, e.g. on office desks.

One touch setup
Handle the relays with just one touch- just hold the smartphone against the front of the relay.

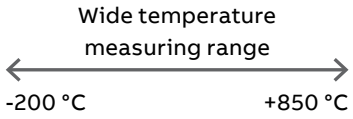
Copy and paste functionality
Simply copy the settings from one device to another–with just one touch to the relay.

Event history
Examine the history of the device and recent events.

One device - thermal protection
Flexible adjustment and condition monitoring

Knowing the status of your devices at all times: thanks to the smart monitoring relays, you are always up to date and flexible in controlling your devices. Remote monitoring via Modbus RTU and ABB Ability™ Energy and Asset Manager also enables the early detection of potential errors and possible maintenance requirements.

Flexible adjustment
The relay can handle commonly used temperature sensors such as PT100 and PTC and supports a wide measuring range from -200...850 °C. The smart monitoring relays are configurable over a wide setting range and can be adjusted flexibly no matter the thresholds, time values or other settings. For example, first relay can be assign as pre-alarm, second as alarm and third as a sensor error. Nine signals are available for assignment to allow various combination of tripping thresholds.

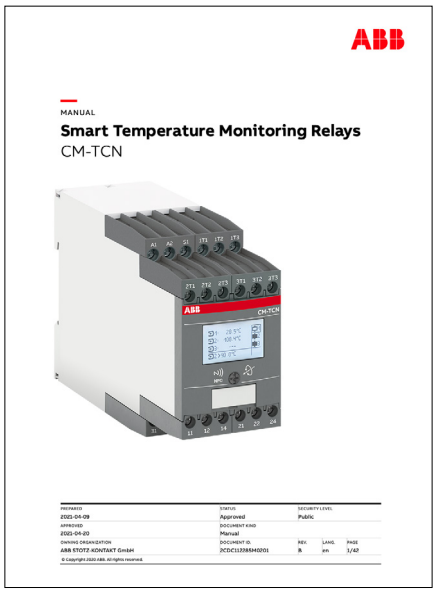


Early detection of potential fault and need for maintenance
Thanks to support of the most commonly used sensors (PTC, PT100, PT1000, NTC), the smart temperature relay can be used for temperature monitoring of busbars and cables allowing detecting the issues related to tightening, which results in the need for maintenance. In addition, the relay can be used for temperature monitoring of electrical motor's bearings and windings allowing to sense unacceptable temperature rise that shorten the lifetime of equipment.

Increased safety
The smart monitoring relays increases the safety thanks to remote temperature monitoring using Modbus RTU or ABB Ability™ Energy and Asset Manager. The personal no longer need to access to the switchboard to read the measurements.

Built-in connectivity
Communication via embedded Modbus RTU

The smart temperature monitoring relay CM-TCN.012 supports the data transfer using the Modbus RTU communication protocol. The communication interface RS-485 is embedded in the relay and does not require installation of any accessories.



CM-TCN manual
Modbus communication map and information about the device configuration can be found in the CM-TCN user manual

The communication interface makes it possible to:

Read the temperature measurements, relays state and temperature sensors status.

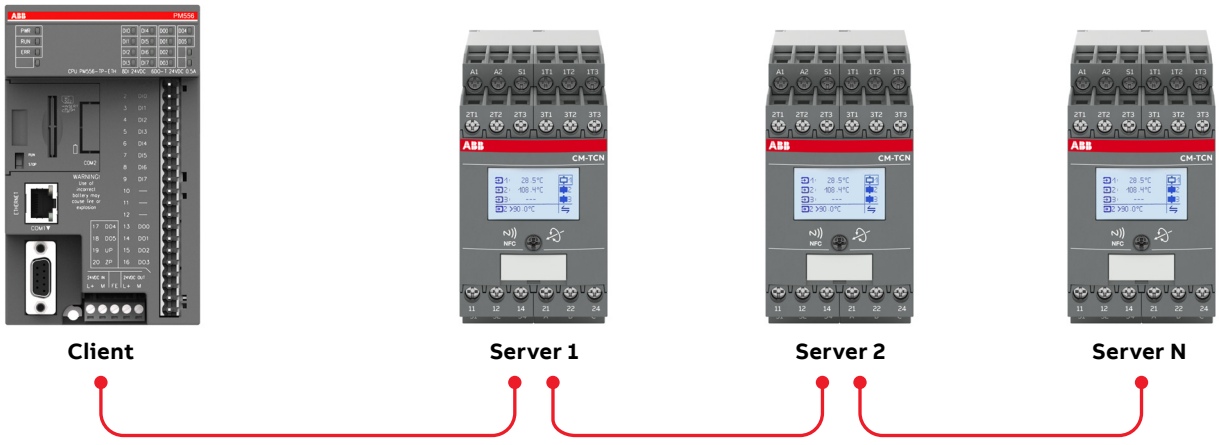
Reset the history and settings (trip counter, event history, etc)

Access the condition monitoring data such as event history, operating hours counter, maintenance counter, statistics.

Read system information (serial number, firmware version)

Configure the smart monitoring relay remotely.

Control output relays and trigger them in case of the communication bus error



Cloud integration with ABB Ability™

Real-time data monitoring and temperature trends

Providing full remote visibility of asset and electrical-system behavior, ABB Ability™ Energy and Asset Manager (EAM) provides insights that help you minimize costs, risks and maximize performance as well as safety across your operations.

The CM-TCN.012 smart monitoring relay is enabled in ABB Ability™ Energy and Asset Manager. Thus, allowing access to the real-time data monitoring and temperature trends from the cloud solution.

The data received from CM-TCN.012 is organized in plain widgets for the remote condition monitoring of assets such as a machine, motor, transformer or switchboard. The temperature trends can be compared between different measuring sensors giving you valuable insights about temperature behavior of your assets at the place of the sensors´ installation.

Additionally, the customer can set up SMS or E-mail alerts to notify key personnel in case of the temperature relay tripping or sensors error. The periodic report with temperature values can also be scheduled.

CM-TCN.012 can be connected to the cloud-computing platform via Modbus RS-485 communication interface. The interface is embedded in the device and does not require any accessories.

The smart relay can share the data with the platform using an external solution with the ABB Ability™ Edge Industrial Gateway.

ABB Ability™ Energy and Asset Manager

Example communication architecture
CM-TCN.12 ABB Ability™ enabled relay

ABB Ability™ Energy and Asset Manager is a state-of-the-art cloud solution that integrates energy and asset management in a single intuitive dashboard.

Integrate a range of devices like circuit breakers, motor controllers and the new CM-TCN.012 monitoring relay into the ABB Ability™ Energy and Asset Manager. It is a state-of-the-art cloud solution that integrates energy and asset management in a single intuitive dashboard. Providing full remote visibility of asset and electrical-system behavior, ABB Ability™ Energy and Asset Manager (EAM) provides insights that help you minimize cost and risk and maximize performance and safety across your operations.

Applications

Temperature monitoring relays are used in a wide array of applications. In conjunction with temperature sensors, such as PT100 or PTC sensors, they monitor motor temperature, control cabinet temperature and protect transformers from overheating.

Smart monitoring relays
Ordering details

CM-TCN

Description
The temperature monitoring relays CM-TCN are able to measure temperatures of solids, liquids and gaseous media within up to three sensor circuits using different types of sensors, such as PT100, PT1000, PTC or NTC within the same time. Different types of sensors, e.g. PT100 and PTC sensors, can be monitored simultaneously.
The temperature is obtained by the sensors in the medium, evaluated by the device and monitored to determine whether it is within an operating range (range monitoring function) or has exceeded or fallen below a threshold. Depending on the parametrization, up to three output relays signalize the changes in the measuring circuits.

Smart temperature monitoring relays CM-TCN

Rated control supply voltage	Terminal type	Display & NFC	Modbus RTU	Temperature sensor	Width mm	Type	Order code	Weight (1 pc) kg (lb)
24-240 V AC/DC*	Screw	yes	no	PT100, PTC, PT1000, NTC	45	CM-TCN.011S	1SVR750740R0110	0.293 (0.646)

Data at Ta = 25 °C and rated values, unless otherwise indicated

Type		**CM-TCN.011**	**CM-TCN.012**
Input circuit		**A1-A2**	
Rated control supply voltage U_s		24-240 V AC/DC*	
Rated control supply voltage U_s tolerance		-15 ... +10 %	
Rated frequency	AC	50 - 60 Hz	
Frequency range	AC	45 - 66 Hz	
Typical current consumption	24 V AC/DC	typ. 30 mA / max. 40 mA	
	115 V AC	typ. 16 mA / max. 20 mA	
	230 V AC	typ. 13 mA / max. 15 mA	
Power failure buffering time		min. 20 ms	
Measuring circuits		**xT1, xT2, xT3**	
Sensor type		PT100, PT1000**, PTC, NTC, bi-metal switch	
Connection of the sensor	2-wire	yes, jumper xT2 - xT3	
	3-wire	yes, use terminal xT1, xT2, xT3	
Interrupted wire detection		yes	
Short-circuit detection		yes	
Measuring ranges	PT100	-200 °C ... +850 °C / -328 °F ... +1562 °F	
	PT1000	-200 °C ... +850 °C / -328 °F ... +1562 °F**	
	NTC	+80 °C ... +155 °C / +176 °F ... +311 °F	
	PTC	max. total resistance of connected resistors in cold state <750 Ohm	
Monitoring functions		undertemperature, overtemperature, window monitoring	
Measuring input range		-200 ... +850 °C / -328 ... +1562 °F	
Hysteresis related to the threshold values		1 ... 99.9 °C / 1.8 ... 179.8 °F	
Measuring principle		continuous current	
Typical current in the sensor circuit	PT100	0.5 mA	
	PT1000	0.5 mA	
Maximum current in sensor circuit		0.5 mA	
Measuring accuracy		± 0.5 K (-50 ... +200 °C / -58 ... +392 °F) ± 1 K (< -50 °C / -58 °F and > 200 °C / 392 °F)	
Accuracy within the rated control supply voltage tolerance		< 0.05 % full scale/1 V	
Accuracy within the temperature range		< 0.05 % full scale/1 K	
Repeat accuracy (constant parameters)		± 0.07 % full scale	
Maximum measuring cycle		< 2 s	
Maximum cable length		500 m / 1 mm^2 (shielded cable)	
Control circuits			
Type of triggering		volt-free triggering	
Control function	S1	remote reset	
Maximum input current		< 1.5 mA	
Maximum no-load voltage at the control inputs		< 15 V	
Minimum control pulse length		150 ms	
Maximum cable length at the control inputs		100 m - 100 pF/m	

* CM-TCN.011: supply voltage 24-240 V AC/DC for revision G or later and supply voltage 24 V AC/DC for revision F or earlier.
** When CM-TCN is used with PT1000 sensors, a bridge must be installed between terminals xT2 and xT3 of unused measuring circuits. The bridge must also be installed between open terminals xT2 and xT3 when CM-TCN is used with one or two PT1000 in combination with PTC or NTC or bimetal switch.
