## Description

**Akyga® AK-EC-01** is a single-phase charger for electric cars that allows you to charge any vehicle with a **Type1** plug using a household electrical outlet with a voltage in the range **110-250 V / 50/60 Hz**. Charging the car in this way is possible thanks to the **Schuko CEE 7/4 plug**, which is equipped with the Akyga charger.

The cable has a **length of 5 meters** and has a **ControlBox**, which indicates the operating status of the device and displays current parameters such as: charging current, mains voltage, charging power, total energy consumed by the device, charger temperature and charging time. The product allows you to adjust the current by setting one of the specified values using the buttons: **8A, 10A, 12A, 16A**. The maximum **charging power is 3.8 kW**.

The charger is equipped with the necessary safeguards such as OVP, OCP, OPP, OTP and SCP. In addition, the device also protects the battery from overheating. On the back of the device housing there is a holder for hanging it, e.g. on the garage wall.
