SAVIO BLACKOUT is a mechanical keyboard, which will be perfect both at home and tournaments. It is perfect even for the most demanding users in mind. The keycaps use "double-injection" technology, which prevents the characters from rubbing off during use, and the life of the switches is up to 50,000,000 clicks. In addition, the two-stage feet allow you to set the keyboard at three different support heights. It adapts to each player's individual preferences. You can position your wrists correctly and comfortably.
