

Cross handle size 90 mm

1/4 inch magnetic holder (SW 6.35)

Item No. 4-109

suitable for all 1/4 inch torque adapters

Specification

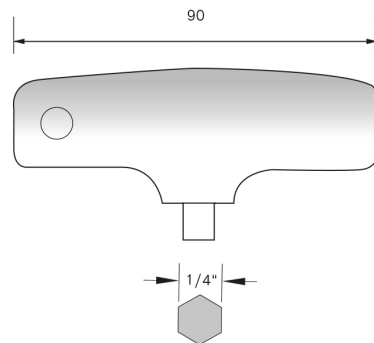

non-slip ergonomic cross handle or T-handle
for high power transmission when tightening and loosening
recommended for torques from 5 NM to 10 NM
1/4 inch magnetic holder (SW 6.35)

Material of socket: steel

Material cross handle: plastic, color black

length 90 mm

weight 60 mm

Application and technology

A cross handle or T-handle has a higher power transmission when tightening and loosening screws than a normal screwdriver handle. Therefore, it is always used when higher torques are to be tightened to avoid friction losses. We recommend the use from 5 Nm up to 10 Nm.

A cross handle or T-handle should always be used at a 90° angle.
