Special versions

WTF and WTHF models (IP69K certified, Ecolab food-graded) for harsh working environments applications.

Watertight enclosures allow light curtains and light grids to be used in a harsh working environments with exposure to water and steam.

The use of inert and non-toxic components allow WTF and WTHF enclosures to be used in the Food & Beverage industry, where frequent wash down procedures are requested.

ECOLAB Material resistance test according to cleaning procedures for food and beverage industry.

See "EOS4 WTF/WTHF" on page 22 and "EOS2 WTF/WTHF" on page 33.

T versions (Textile)

Special versions resistant to high vibrations for applications in the textile industry.

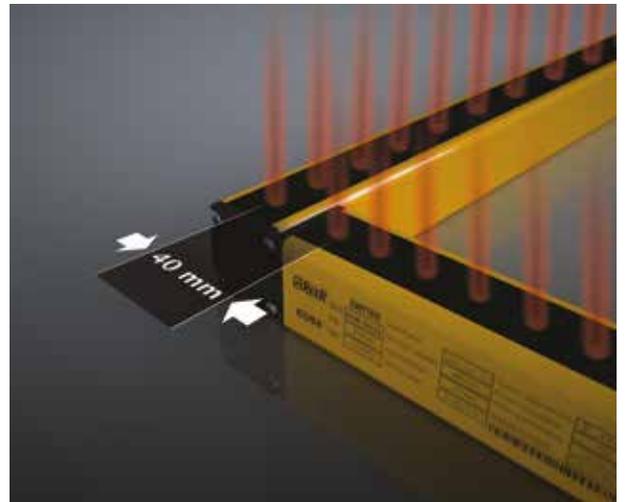

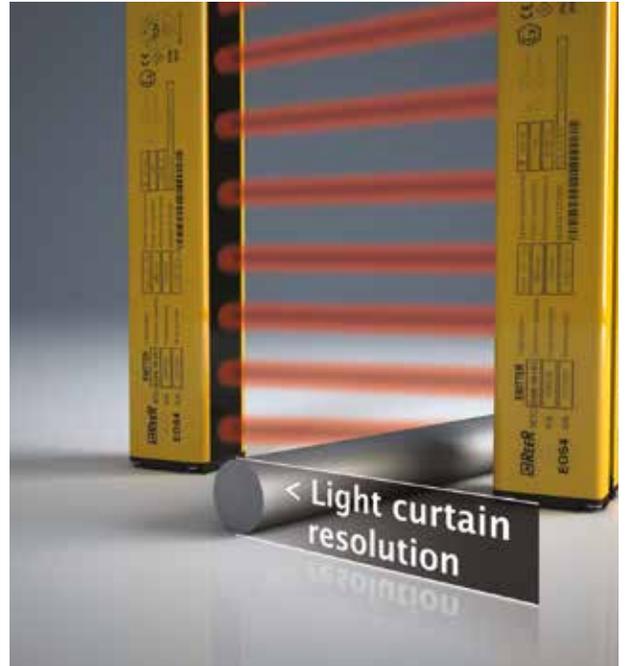

These versions are able to maintain the alignment of the beams also the presence of strong mechanical stresses and vibrations.

See "EOS4 Textile" on page 24 and "EOS2 Textile" on page 35.

MAIN FEATURES

- Minimal cross section: 28 x 30 mm
- Start-up time: ≤ 2 sec
- Master/Slave versions for cascade connection of two or three curtains
- No blind area on one side
The position of first beam ensures that the sensitive area extends to end of the light curtain. The protected area extends until the light curtain end, maintaining the resolution
- The solution with two L-mounted light curtains, e.g. Master/Slave, maintains a 40 mm resolution in corners (models with resolution up to 40 mm)

-30 ... +55 °C operating temperature for all models with operating range up to 12 m.

-20 ... +55 °C operating temperature for H models (operating range up to 20 m) and 14 mm resolution models.

IP65 and IP67 protection rate.

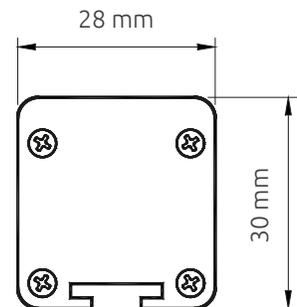

Special versions resistant to vibrations and shocks.

See EOS4 Textile on page 24 and EOS2 Textile on page 35.

IP69K watertight enclosure (WTF and WTHF), suitable for the Food & Beverage industry. See "EOS4 WTF / WTHF" on page 22 and "EOS2 WTF / WTHF" on page 33.

CASCADING FUNCTION

MASTER/SLAVE VERSIONS WITH BUILT-IN CONTROL FUNCTIONS

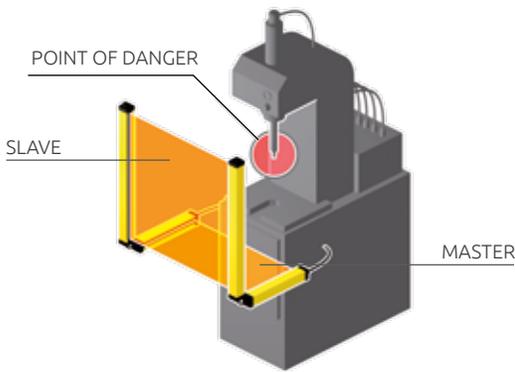

Master/Slave versions allow series connection of up to three light curtains with the following major benefits:

- Combined detection (hand + presence of a person or protection of more sides of the machine)
- Single pair of safety outputs is used
- No interference between light curtains installed adjacent to one another

All electrical connections made using M12 5-pole connectors, except for Master receivers which require the use of M12 8-pole connectors.

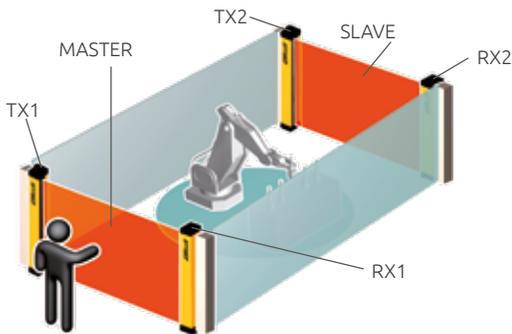

Pre-wired cables with twin connectors are available for the connection between Master and Slave.

APPLICATION EXAMPLES

The application shows a horizontal curtain used to prevent the operator from being undetected in the space between vertical light curtain and dangerous machine, upon system start-up or restarting.

The master light curtain is placed horizontally for the detection of the standing person, while the slave light curtain is placed vertically to detect operator's fingers or hands.

Example of series connection of master and slave light curtains for protection of two sides of the machine.

Thus, two series connected curtains may be located one at the front of the machine and the other at the rear, with a single connection to the machine power and control circuitry.

Example of series connection of one master and two slave light curtains for the protection of three sides of the machine.

Benefit: unimpeded operator access to work area from front and sides.

Safety parameters for Type 2 light curtains

With the publication of Edition 3 of the harmonized EN 61496-1 standard it is no longer possible to use a Type 2 safety light curtains for safety functions assessed as SIL 2 / PL d.

If a safety level of SIL 2 / PL d (or higher) is required and it is nevertheless intended to use a safety light curtain, then it will be necessary to use a Type 4 safety light curtain. This regulatory requirement derives from the fact that the reduction of risk that can be obtained via a photoelectric safety light curtain is not only a function of the safety level of its electronic parts, but is also determined by its systematic capabilities (for example: environmental influences, EMC, optical performance and detection principle).

The systematic capability of a Type 2 photoelectric light curtain may in fact not be sufficient to ensure adequate risk reduction for SIL 2 / PL d applications. The standard also establishes that the labelling of Type 2 safety light curtains must indicate such limitation to SIL 1 / PL c. The PFH_d values declared for the electronic control part of the device, on the other hand, are not limited and therefore it is possible to use the PFH_d value provided by the manufacturer of the device in the Global assessment of the safety function, even if it exceeds the SIL 1 / PL c range.

Watertight enclosures allow light curtains and light grids to be used in a harsh working environments with exposure to water and steam.

The use of inert and non-toxic components allow WTF and WTHF enclosures to be used in the Food & Beverage industry, where frequent wash down procedures are requested.

WTHF versions (heated) have a thermostatically controlled heating system and can work down to -25 °C.

Protected height: 160 ... 1810 mm.

TECHNICAL FEATURES

Operating temperature (°C)	WTF: 0 ... +55 WTHF: -25 ... +50 (with heating system)
Max. water pressure jets	80 ... 100 bar at 80° C (± 5° C)
Max. range (m)	Selectable 2 or 5 for 14 mm resolution models Selectable 8 or 17 for H versions
Electrical connections	10-meter cable pre-wired with cable gland
WTHF heated power consumption	24 VDC - 20 W x Protected height (m)
Fastening	Fastening brackets included

The small EOS WTF and WTHF cylindrical enclosure (only 56 mm diameter) is IP69K protection-rate tested and can withstand up to 80 bar of water jets pressure at the temperature of +80 °C.

Enclosure incorporates a valve to drain humidity and to avoid condensation.

Material resistance test according to cleaning procedures for food and beverage industry.

Test procedure: Ecolab-test F&E Nr. 40-1

- Dipping test - Complete immersion in solution/liquid, Test Period: 28 days
- Rinsing with water +40, +50 °C - Rinsing with low pressure. Rinsing from top to bottom in the direction of the drains
- Cleaning of the drains
- Foaming from bottom to top - Alkaline: P3-topax 66 - Acid: P3-topax 56 - Temperature: cold up to +40 °C - Contact time: 15 min. recommended
- Rinsing with water +40, +50 °C - Rinsing from top to bottom with low pressure

Watertight enclosures allow safety light curtains and access control barriers to be used in harsh working environments with exposure to water and steam.

Thanks to its inert (non-toxic) components, no residuals are left when the light curtains are washed down or when they come directly in contact with food. This makes WTF and WTHF enclosures suitable for the Food & Beverage industry.

WTHF version (heated) has a thermostatically controlled heating system and can work down to -25°C .

Protected height: 160 ... 1810 mm.

TECHNICAL FEATURES

Technical features for the light curtain	EOS2 X
Operating temperature ($^{\circ}\text{C}$)	WTF: 0 ... +55 WTHF: -25 ... +50 (with heating system)
Max. water pressure jets	80 ... 100 bar at 80°C ($\pm 5^{\circ}\text{C}$)
Max. range (m)	Selectable 3 or 10
Electrical connections	10 m cable pre-wired with cable gland
WTHF heated power consumption	24 VDC - 20 W x Protected height (m)
Fastening	Fastening brackets included

See IP69K and Ecolab marking characteristics on page 22.

WATERTIGHT ENCLOSURE

The watertight enclosure is made of:

- PMMA (polymethyl methacrylate) transparent enclosure
- POM-C (acetal resin – DELRIN®) sealing caps
- Anti-condensation system trough integrated GORE™ valve
- POM-C and stainless steel fastening brackets (AISI 316L)

APPLICATIONS

- Washing systems
- Food and beverage industry applications
- Any system that requires a wash down procedure or constantly exposed to high pressure water and steam

Support columns with deflecting mirrors, designed to provide secure fastening to the floor, fast installation, and a simple and precise adjustment of the optical alignment of the system.

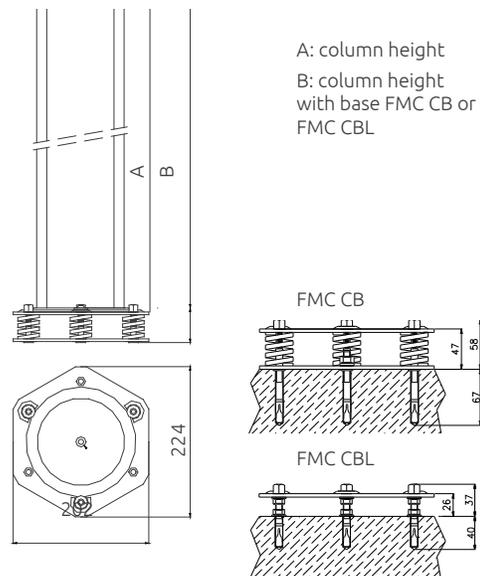

FMC S models with pre-assembled deflecting mirrors, allow perimeter protections of up to 4 sides.

FMC SB models with pre-installed independent adjustable deflecting mirrors for safety light grids with 2, 3 and 4 beams. For applications with multiple sides and/or with a large protected perimeter is recommended the use of this models.

Optical power reduction factor: 15% for each mirror.

Special models equipped with mirror with protective anti-fragmentation film available on request.

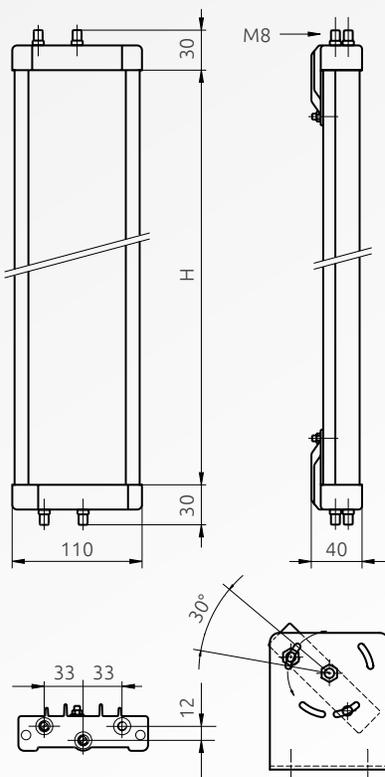

NOTE: for more information on how to chose mirrors, please refers to Reer website, section "Light Curtains - Applications".

The SP deflecting mirrors allow to create perimeter protection of areas with access points on multiple sides, with a considerable reduction of costs.

This solution eliminates the need to use multiple safety light curtains allowing perimeter protection of up to 4 sides.

The following rules should be taken into consideration when using deflecting mirrors:

- Total working distance (range) given by the sum of the lengths of all sides giving access to the protected area
- Each mirror used will decrease the maximum working range between the Emitter and the Receiver by 15%
- In order to ensure compliance mirrors must be placed at the minimum safety distance on each side from the danger zone
- The use of the LAD laser alignment device is recommended for a quick and reliable alignment of the system especially when using longer range light curtains or grids

NOTE: for more information on how to chose mirrors, please refers to Reer website, section "Light Curtains - Applications".

The SFB 4E / SFB 6E swivel brackets allow the rotation of the light curtain around its longitudinal axis, as well as the adjustment of its vertical and horizontal position.

The use of the SFB 4E / SFB 6E swivel brackets is recommended to align those light curtains which are employed in applications having a long range or using deflecting mirrors.

The SFB E180 swivel brackets allow the 180° rotation of the light curtain around its longitudinal axis, as well as the adjustment of its vertical and horizontal position.

The use of the SFB E180 swivel brackets is recommended to align those light curtains which are employed in applications having a long range or using deflecting mirrors.

The FE 4 brackets, with a thickness of only 4 mm, allow proper fastening of EOS light curtains.

The fast-coupling SFB FAST brackets allow a fast and accurate mechanical fixing of the EOS series barriers.

A fine adjustment on the rotation axis of the light curtains of $\pm 6^\circ$ is allowed.

Made of PA 6.6 reinforced with glass fiber plastic, these brackets are extremely durable.

SAV 4E, SAV 8E, SAV 12E VIBRATION DAMPERS

PART NUMBERS

Model	Part number	Description	For light curtains with protected height mm / beams
SAV 4E	1310972	Set of 4 vibrations dampers	160
SAV 8E	1310973	Set of 8 vibrations dampers	310 ... 1050

One set must be ordered for each pair of light curtain (emitter + receiver)

The SAV vibration dampers have been designed to avoid mechanical damage to the light curtains installed in those applications with a high level of vibrations.

The unprotected light curtains might resent the vibrations produced by e.g. presses, weaving machines, etc.

PSE is a polycarbonate protective screen that preserves the light curtain's front screen from damages due to welding sparks or due to the presence of acids in the workspace.

Protective screens can be quickly replaced thanks to the fast and easy stainless steel clamping system.

The test rod is an opaque cylinder used after the installation of a safety light curtain to verify that no beams are bypassed due to the presence of reflecting surfaces.

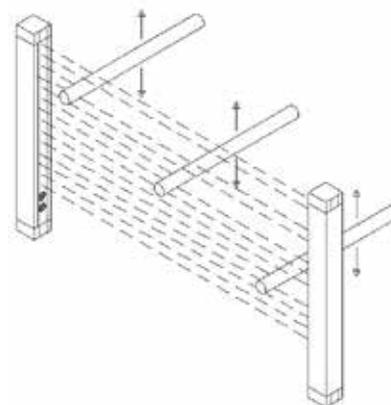

The test is carried out by slowly moving the test rod (\varnothing = Resolution) in the centre and then along each side of the protected area. During this procedure the Green led on the Receiver must always remain in the off state.
