➤ SOLUTION GLOBALE  
DE PROTECTION AUX ESD

-EUROSTAT-

Do not use gloves when there is a risk of catching moving parts of the machine. The protective property only binds to the front of the glove - palm. Always use the correct size gloves and visually check their condition before each use. Never wear worn, damaged or otherwise damaged gloves. In people with sensitive skin, the possibility of skin irritation is not excluded, as the elastic cuff contains natural latex, which causes an allergic reaction in some people. In this case, do not continue to use gloves and seek professional help.

### Note

The specified level of protection, according to EN 388, can help with the selection of the glove, but it is important to note that the application conditions cannot be simulated in a laboratory, and it is the responsibility of the user, not the manufacturer, to approve the application in specific conditions (working operation).
