## ■ Power Derating Curve

The Operating Temperature Range: -55°C ~+170°C

For resistors operated in ambient temperatures above 70°C, power rating must be derated in accordance with the curve below

## ■ Rating Current

The following equation may be used to determine the DC (Direct Current) or AC (Alternating Current) (RMS, root mean square value) of normal rated power. However, if the result value exceeds the highest current of regulated standards (paragraph 5), the highest normal rated power is to be used

$$I = \sqrt{P/R}$$

I= Rating current (A)

P= Rating Power (W)

R= Resistance(Ω)

## ■ Marking Format

- All type products marking are 4 digits.  
 "R" designates the decimal location in ohms  
 e.g. 1mΩ the product marking is R001.  
 5mΩ the product marking is R005 .  
 10mΩ the product marking is R010.  
 "M" designates the decimal location in milli-ohms  
 e.g. 0.5mΩ the product marking is 0M50.  
 1.5mΩ the product marking is 1M50.  
 2.5mΩ the product marking is 2M50.
  - The criteria to distinguishing the mark on the surface of products are that characters can be identified.
- Specifications are subject to change without notice.*
