FAQ

Q Is the set-top box connected to the monitor overclocked/ not displayed?

A: Due to the low resolution of the display, the HDD of the set-top box cannot be displayed. You can adjust the resolution of the set-top box to within the resolution range of the display and then connect it.

Q Why is there no sound when the computer is connected to the desktop?

A: Since HDMI itself is audio and video synchronous transmission, the audio will be transmitted from HDMI by default after connecting to the computer. The default audio can be transferred to the computer audio transmission in the computer settings. Please contact customer service for the specific operation method.

Q Why does the converter heat up during use?

A: The converter has a built-in signal conversion chip, which generates heat during use. It is normal, please feel free to use it.
