

**ProLight PBEE-55F4E-NRBGPG**  
**55W Power LED**  
**Technical Datasheet**  
**Version: P1.1**

# ProLight Opto ProEngine Series

## Features

- Compact light source
- R, B, G, PC Green four color in one package
- Lead free reflow soldering
- Superior ESD protection
- RoHS compliant

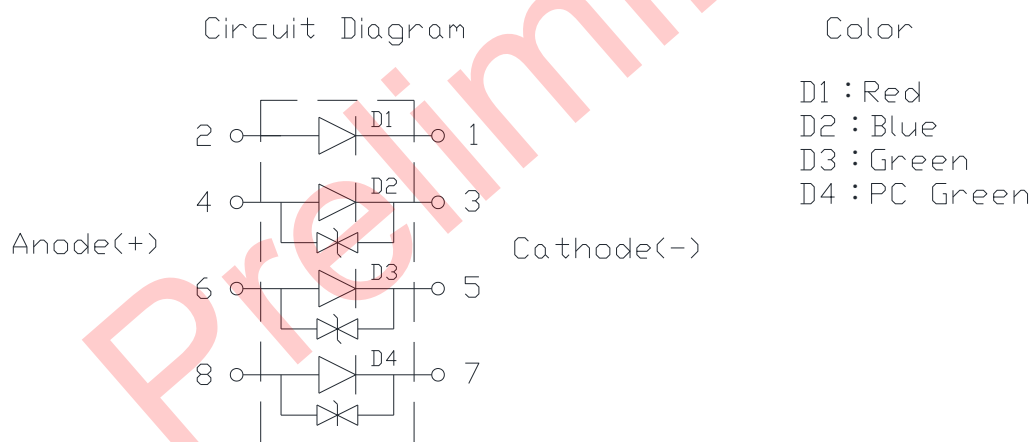

## Main Applications

- Entertainment lighting (Stage lighting)
- Architectural lighting
- Mood lighting
- Outdoor lighting
- Indoor lighting

## Introduction

- ProLight PBEE colorful series is a color changeable LED with maximum 4 color chips in one package. Compared to discrete LEDs, PBEE series reduce the distance between LED die, creating a small optical source for excellent optical control and efficient color mixing. ProLight PBEE series is much suitable for the application of color-changing lighting, especially for entertainment lighting.

## Emitter Mechanical Dimensions

### Notes:

1. Drawing not to scale.
2. All dimensions are in millimeters.
3. Unless otherwise indicated, tolerances are  $\pm 0.15\text{mm}$ .
4. Please do not solder the emitter by manual hand soldering, otherwise it will damage the emitter.
5. **Please do not use a force of over 1kgf impact or pressure on the lens of the LED, otherwise it will cause a catastrophic failure.**

\*The appearance and specifications of the product may be modified for improvement without notice.

## Flux Characteristics, $T_j = 25^\circ\text{C}$

### Luminous Flux or Radiometric Power

| Color    | Part Number<br>Emitter | @1000mA |         | Refer @3000mA | Refer @4000mA |
|----------|------------------------|---------|---------|---------------|---------------|
|          |                        | Min.    | Typ.    | Typ.          | Typ.          |
| Red      | PBEE-55F4E-<br>NRBGP   | 110 lm  | 150 lm  | 405 lm        | -             |
| Blue     |                        | 1080 mW | 1310 mW | 3115 mW       | 3695 mW       |
| Green    |                        | 190 lm  | 270 lm  | 500 lm        | 555 lm        |
| PC Green |                        | 275 lm  | 365 lm  | 870 lm        | 1030 lm       |

- **Do not use below 40mA.**
- ProLight maintains a tolerance of  $\pm 7\%$  on flux and power measurements.
- Please do not drive at rated current more than 1 second without proper heat sink.

## Electrical Characteristics, $T_j = 25^\circ\text{C}$

### Forward Voltage $V_F$ (V)

| Color    | @1000mA |      |      | Refer<br>@3000mA | Refer<br>@4000mA | Thermal Resistance<br>Junction to Slug ( $^\circ\text{C}/\text{W}$ ) |
|----------|---------|------|------|------------------|------------------|--|
|          | Min.    | Typ. | Max. | Typ.             | Typ.             |  |
| Red      | 1.85    | 2.30 | 2.80 | 2.90             | -                | 1.1  |
| Blue     | 2.70    | 3.00 | 3.40 | 3.60             | 3.80             |  |
| Green    | 2.70    | 3.00 | 3.40 | 3.75             | 4.00             |  |
| PC Green | 2.70    | 3.00 | 3.40 | 3.60             | 3.80             |  |

- ProLight maintains a tolerance of  $\pm 0.1\text{V}$  for Voltage measurements.

## Optical Characteristics at 1000mA, $T_j = 25^\circ\text{C}$

| Radiation<br>Pattern | Color    | Dominant Wavelength $\lambda_D$ |          |        | Total<br>included<br>Angle<br>(degrees) | Viewing<br>Angle<br>(degrees) |
|----------------------|----------|---------------------------------|----------|--------|---|-------------------------------|
|                      |          | Min.                            | Typ.     | Max.   | $\theta_{0.90V}$                        | $2\theta_{1/2}$               |

## Photometric Luminous Flux Bin Structure at 1000mA

| Color    | Bin Code | Minimum Photometric Flux (lm) | Maximum Photometric Flux (lm) |
|----------|----------|-------------------------------|-------------------------------|
| Red      | A        | 110                           | 135                           |
|          | B        | 135                           | 165                           |
|          | C        | 165                           | 200                           |
| Green    | A        | 190                           | 230                           |
|          | B        | 230                           | 275                           |
|          | C        | 275                           | 330                           |
|          | D        | 330                           | 400                           |
| PC Green | A        | 275                           | 330                           |
|          | B        | 330                           | 390                           |
|          | C        | 390                           | 460                           |

- ProLight maintains a tolerance of  $\pm 7\%$  on flux and power measurements.
- The flux bin of the product may be modified for improvement without notice.

## Radiometric Power Bin Structure at 1000mA

| Color | Bin Code | Minimum Radiometric Power (mW) | Maximum Radiometric Power (mW) |
|-------|----------|--------------------------------|--------------------------------|
| Blue  | A        | 1080                           | 1230                           |
|       | B        | 1230                           | 1400                           |
|       | C        | 1400                           | 1600                           |

- ProLight maintains a tolerance of  $\pm 7\%$  on flux and power measurements.
- The flux bin of the product may be modified for improvement without notice.

## Dominant Wavelength Bin Structure

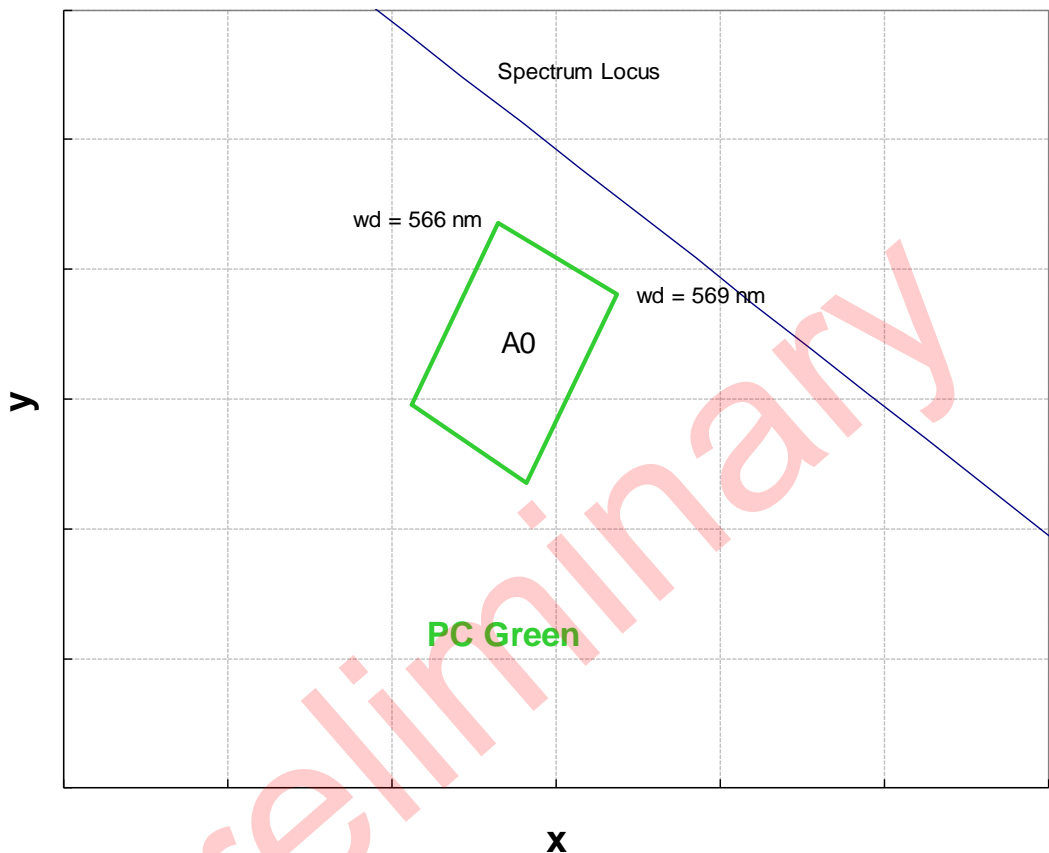

| Color | Bin Code | Minimum Dominant Wavelength (nm) | Maximum Dominant Wavelength (nm) |
|-------|----------|----------------------------------|----------------------------------|
| Red   | 4        | 620                              | 630                              |
| Blue  | 5        | 450                              | 455                              |
| Green | 1        | 523                              | 528                              |
|       | 2        | 525                              | 530                              |

- ProLight maintains a tolerance of  $\pm 1\text{nm}$  for dominant wavelength measurements.

Note: Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all colors.

## Moisture Sensitivity Level - JEDEC Level 1

| Level | Floor Life |                                    | Soak Requirements |                               |                         |            |
|-------|------------|------------------------------------|-------------------|-------------------------------|-------------------------|------------|
|       |            |                                    | Standard          |                               | Accelerated Environment |            |
|       | Time       | Conditions                         | Time (hours)      | Conditions                    | Time (hours)            | Conditions |
| 1     | Unlimited  | $\leq 30^{\circ}\text{C}$ / 85% RH | 168 +5/-0         | $85^{\circ}\text{C}$ / 85% RH | NA                      | NA         |

- The standard soak time includes a default value of 24 hours for semiconductor manufacture's exposure time (MET) between bake and bag and includes the maximum time allowed out of the bag at the distributor's facility.
- Table below presents the moisture sensitivity level definitions per IPC/JEDEC's J-STD-020C.

| Level | Floor Life          |                                    | Soak Requirements   |                               |                         |                               |
|-------|---------------------|------------------------------------|---------------------|-------------------------------|-------------------------|-------------------------------|
|       |                     |                                    | Standard            |                               | Accelerated Environment |                               |
|       | Time                | Conditions                         | Time (hours)        | Conditions                    | Time (hours)            | Conditions                    |

## Qualification Reliability Testing

| Stress Test                            | Stress Conditions   | Stress Duration | Failure Criteria        |
|--|---|-----------------|-------------------------|
| Room Temperature Operating Life (RTOL) | 25°C, $I_F = \text{max DC}$ (Note 1)  | 1000 hours      | Note 2                  |
| High Temperature Storage Life (HTSL)   | 110°C, non-operating  | 1000 hours      | Note 2                  |
| Low Temperature Storage Life (LTSL)    | -40°C, non-operating  | 1000 hours      | Note 2                  |
| Non-operating Temperature Cycle (TMCL) | -40°C to 120°C, 30 min. dwell, <5 min. transfer                             | 200 cycles      | Note 2                  |
| Mechanical Shock                       | 1500 G, 0.5 msec. pulse, 5 shocks each 6 axis                               |                 | Note 3                  |
| Natural Drop                           | On concrete from 1.2 m, 3X  |                 | Note 3                  |
| Variable Vibration Frequency           | 10-2000-10 Hz, log or linear sweep rate, 20 G about 1 min., 1.5 mm, 3X/axis |                 | Note 3                  |
| Solder Heat Resistance (SHR)           | 260°C $\pm$ 5°C, 10 sec.  |                 | Note 3                  |
| Solderability                          | Steam age for 16 hrs., then solder dip at 260°C for 5 sec.                  |                 | Solder coverage on lead |

Notes:

- Depending on the maximum derating curve.
- Criteria for judging failure

| Item  | Test Condition        | Criteria for Judgement |                     |
|---|-----------------------|------------------------|---------------------|
|   |                       | Min.                   | Max.                |
| Forward Voltage ( $V_F$ )                       | $I_F = \text{max DC}$ | --                     | Initial Level x 1.1 |
| Luminous Flux or Radiometric Power ( $\Phi_V$ ) | $I_F = \text{max DC}$ | Initial Level x 0.7    | --                  |

\* The test is performed after the LED is cooled down to the room temperature.

- A failure is an LED that is open or shorted.

### Solder Pad

## Solder Resist

- All dimensions are in millimeters.
- Electrical isolation is required between Thermal Pad and Solder Pad.

## Recommended MCPCB Design

- Copper(Cu) substrate is recommended.

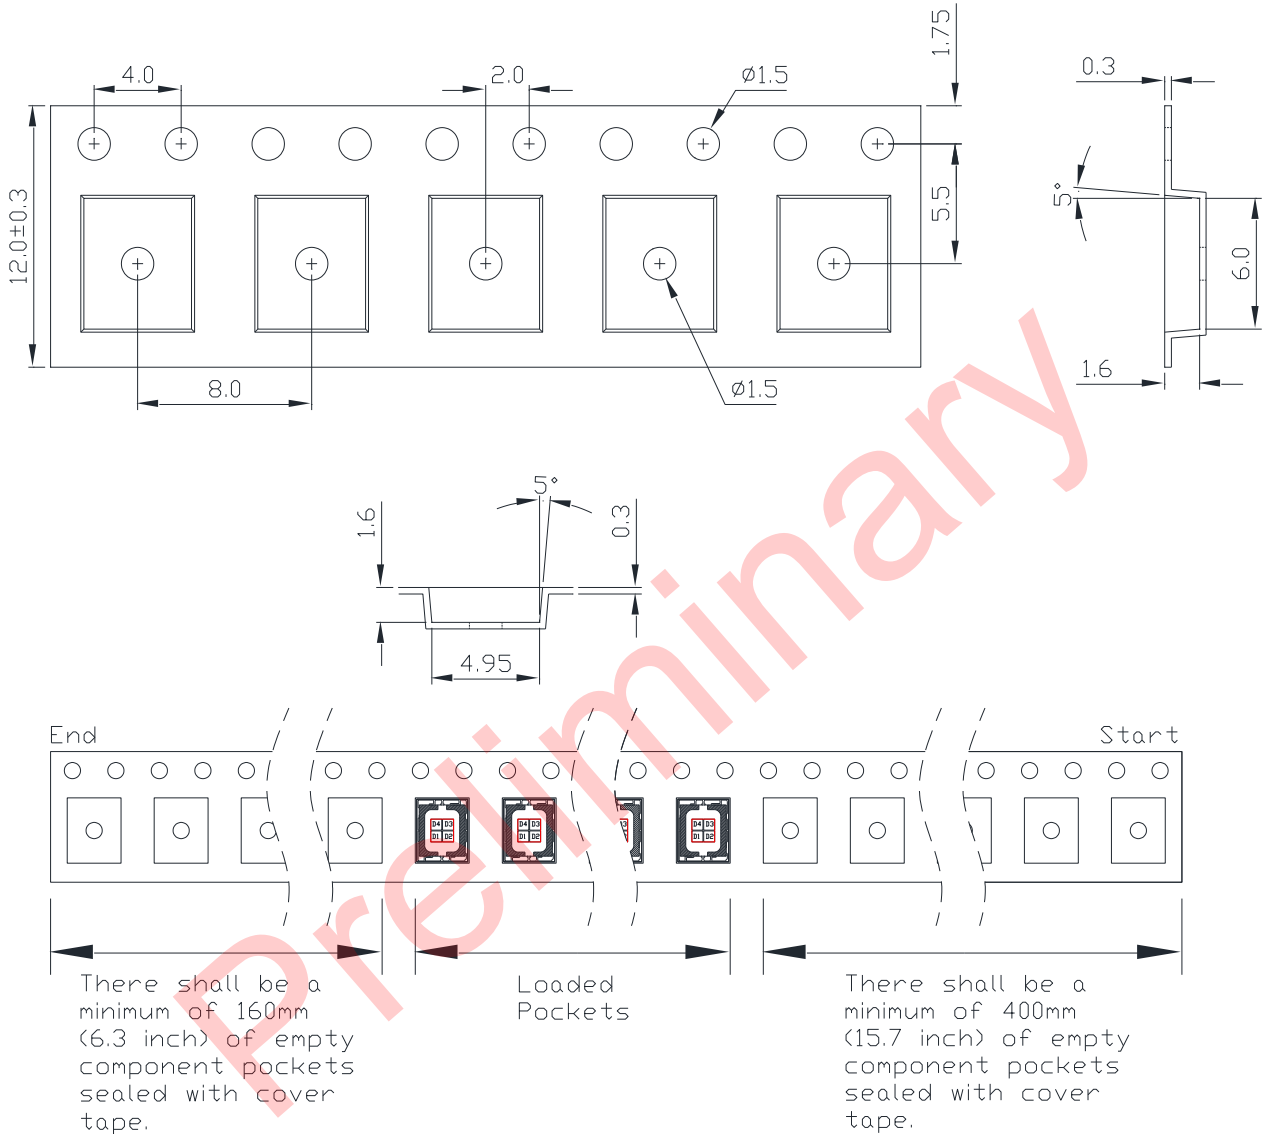

## Reflow Soldering Condition

| Profile Feature   | Sn-Pb Eutectic Assembly          | Pb-Free Assembly                 |
|---|----------------------------------|----------------------------------|
| Average Ramp-Up Rate<br>( $T_{Smax}$ to $T_P$ )   | 3°C / second max.                | 3°C / second max.                |
| Preheat <ul style="list-style-type: none"> <li>– Temperature Min (<math>T_{Smin}</math>)</li> <li>– Temperature Max (<math>T_{Smax}</math>)</li> <li>– Time (<math>t_{Smin}</math> to <math>t_{Smax}</math>)</li> </ul> | 100°C<br>150°C<br>60-120 seconds | 150°C<br>200°C<br>60-180 seconds |
| Time maintained above: <ul style="list-style-type: none"> <li>– Temperature (<math>T_L</math>)</li> <li>– Time (<math>t_L</math>)</li> </ul>  | 183°C<br>60-150 seconds          | 217°C<br>60-150 seconds          |
| Peak/Classification Temperature ( $T_P$ )   | 240°C                            | 260°C                            |
| Time Within 5°C of Actual Peak Temperature ( $t_P$ )  | 10-30 seconds                    | 20-40 seconds                    |
| Ramp-Down Rate  | 6°C/second max.                  | 6°C/second max.                  |
| Time 25°C to Peak Temperature   | 6 minutes max.                   | 8 minutes max.                   |

- We recommend using the M705-S101-S4 solder paste from SMIC (Senju Metal Industry Co., Ltd.) for lead-free soldering.
- Do not use solder pastes with post reflow flux residue>47%. (58Bi-42Sn eutectic alloy, etc) This kind of solder pastes may cause a reliability problem to LED.
- All temperatures refer to topside of the package, measured on the package body surface.
- Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used. It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.
- Reflow soldering should not be done more than three times.
- When soldering, do not put stress on the LEDs during heating.
- After soldering, do not warp the circuit board.

## Emitter Reel Packaging

### Notes:

1. Drawing not to scale.
2. All dimensions are in millimeters.
3. Unless otherwise indicated, tolerances are  $\pm 0.1$ mm.

## Emitter Reel Packaging

### Notes:

1. Empty component pockets sealed with top cover tape.
2. 250 or 500 pieces per reel.
3. Drawing not to scale.
4. All dimensions are in millimeters.

## Precaution for Use

- We recommend using the M705-S101-S4 solder paste from SMIC (Senju Metal Industry Co., Ltd.) for lead-free soldering.
- Do not use solder pastes with post reflow flux residue > 47%. (58Bi-42Sn eutectic alloy, etc) This kind of solder pastes may cause a reliability problem to LED.
- Any mechanical force or any excess vibration shall not be accepted to apply during cooling process to normal temperature after soldering.
- Please avoid rapid cooling after soldering.
- Components should not be mounted on warped direction of PCB.
- Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable, a heat plate should be used. It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.
- This device should not be used in any type of fluid such as water, oil, organic solvent and etc. When cleaning is required, isopropyl alcohol should be used.
- When the LEDs are illuminating, operating current should be decided after considering the package maximum temperature.
- The appearance, specifications and flux bin of the product may be modified for improvement without notice. Please refer to the below website for the latest datasheets.

## Handling of Lens LEDs

Notes for handling of lens LEDs

- Please do not use a force of over 1kgf impact or pressure on the lens, otherwise it will cause a catastrophic failure.
- The LEDs should only be picked up by making contact with the sides of the LED body.
- Avoid touching the lens especially by sharp tools such as Tweezers.
- Avoid leaving fingerprints on the lens.
- Please store the LEDs away from dusty areas or seal the product against dust.
- Please do not mold over the lens with another resin. (epoxy, urethane, etc)

## Disclaimers

ProLightopto Technology has made every reasonable effort to ensure the accuracy of the information in this datasheet. However, it should be understood that this information is for guidance only and does not constitute any offer or part of a contract.

ProLightopto Technology does not guarantee or accept any legal liability for the accuracy, completeness, or usefulness of any information, product, technology, or process disclosed in this datasheet. The company reserves the right to make changes or improvements to this datasheet at its discretion.

Unless this datasheet is incorporated into a formal contract, customers should not rely on the information as a binding commitment to any specifications or product parameters by ProLightopto Technology. Customers are advised to verify that the information is current and complete before entering into any contract or acknowledging any purchase order. Therefore, all products described herein are subject to ProLightopto Technology's terms and conditions at the time of order acknowledgment.

Unless agreed upon by contractual agreement, not all parameters of each product are necessarily tested. ProLightopto Technology does not warrant or grant any license, either expressed or implied, under its patent rights or the rights of others.

Reproduction of the information contained herein is permitted only if done without any modifications or alterations. Altering this information and reproducing it is considered an unfair and deceptive business practice. ProLightopto Technology is not responsible or liable for any such altered documentation.

Reselling ProLightopto Technology's products with statements that differ from or exceed the parameters specified by ProLightopto Technology voids all express or implied warranties for the associated product or service and is considered an unfair and deceptive business practice. ProLightopto Technology is not responsible or liable for any such statements.

ProLightopto Technology's products are not authorized for use as critical components in life support devices or systems without explicit written approval from ProLightopto Technology.

For the purposes of this disclaimer :

1. Life support devices or systems are defined as those intended for surgical implant into the body or those that support or sustain life. Their failure, when used according to instructions for use provided in the labeling, can reasonably be expected to result in significant injury to the user.
2. A critical component is any component of a life support device or system whose failure can reasonably be expected to cause the failure of the device or system, or to affect its safety or effectiveness.
