Q & A

Q

Why does the charging become slower as the battery nears 80%?

A

When the power is charged to 80%, the power tuner chip adjusts the power output to safeguard your connected device.

Q

Is it normal for the charging notification sound to beep once or twice intermittently?

A

Yes, it is normal to hear either one or two charging notification sounds.

Q

Is it common for the connection not to be very firm when using a PD charger?

A

The manufacturing process adheres to the standard. Due to the compact size of the USB-C port, slight movement is normal and does not impact the product's functionality or secure connection.
