

Module RLE ADV2 OTD

Modules RLE advanced

**Product description**

- _ High efficiency outdoor modules
- _ Suitable for harsh and humid outdoor conditions
- _ Tested acc. to salt spray test (IEC 60068-2-52) and harmful gas test (GR-1217-CORE)
- _ Huge performance temperature range from -40 ... +95 °C
- _ Surge tested (+/- to earth) 6 kV with Tridonic LED driver
- _ Integrated NTC for overtemperature protection
- _ For use with x16 lenses (e.g. LEDiL STRADELLA 16)
- _ Push-in terminals for simple and quick wiring
- _ HE ... High Efficiency, NM ... Nominal Mode, HO ... High Output
- _ Long lifetime up to 80,000 hours
- _ 5 years guarantee (conditions at <https://www.tridonic.com/manufacture-guarantee-conditions>)

Optical properties

- _ Colour temperatures 2,200K, 2,700 K, 3,000 K, 4,000 K, 5,000 K and 6,500 K
- _ Useful luminous flux 4,300 lm at Irated and tp = 25 °C
- _ Efficacy of the LED module 190 lm/W at Irated and tp = 25 °C
- _ High colour rendering index CRI > 80
- _ Small luminous flux tolerances ^①

Mechanical properties

- _ Module dimension 49.5 x 121.4 mm and 49.5 x 223 mm
- _ Installation of the module together with lens in the luminaire by means of an M3 screw

① Integral measurement over the complete module.

Technical data

Beam characteristic	120°
Ambient temperature t_a	-40 ... +80 °C
t_p rated	75 °C
t_c	95 °C
I_{rated}	500 mA
I_{max}	720 mA
Max. permissible LF current ripple	800 mA
Max. permissible peak current	1,200 mA / max. 10 ms
Max. working voltage for insulation [®]	410 V
Max. working voltage for insulation with lens	570 V
Insulation test voltage	1.82 kV
CTI of the printed circuit board	> 600
Colour tolerance	3 SDCM
ESD classification	Severity level 2
Risk group (IEC 62471) [®]	RG0
Classification acc. to IEC 62031	Built-in
Type of protection	IP00
Lumen maintenance L70B50	80,000 h
Guarantee (conditions at www.tridonic.com)	5 Year(s)

② If mounted with M3 screws.

③ Measured at $I = 800\text{ mA}$.④ Tolerance of useful light flux - 0 % / + 15 %. Measurement uncertainty $\pm 10\%$.⑤ Tolerance of expected light flux - 0 % / + 15 %. Measurement uncertainty $\pm 10\%$. Based on calculation.⑥ Tolerance of power consumption $P_{on} \pm 10\%$. Measurement uncertainty $\pm 5\%$.

1. Standards

EC 62031
IEC 62778
IEC 62471
IEC 61000-4-2
IEC 60068-2-52
UL 8750 (for dry and damp locations)
GR-1217-CORE

1.1 Photometric code

Key for photometric code, e. g. 830 / 459

1 st digit	2 nd + 3 rd digit	4 th digit	5 th digit	6 th digit
Code	CRI	Colour temperature in Kelvin x 100	MacAdam after 25% of the lifetime (max.6000h)	Luminous flux after 25% of the lifetime (max.6000h)
7	70 – 79	MacAdam initial	(max.6000h)	Code
8	80 – 89			Luminous flux
9	≥90			7 ≥ 70 %
				8 ≥ 80 %
				9 ≥ 90 %

1.2 Energy classification

Type	Colour temperature	Forward current	Energy classification	Energy consumption
RLE 4x8 2000lm				
RLE 4x8 2000lm 822 MP ADV2 OTD	2,200 K	500 mA	D	12 kWh / 1,000 h
RLE 4x8 2000lm 827 MP ADV2 OTD	2,700 K	500 mA	C	12 kWh / 1,000 h
RLE 4x8 2000lm 830 MP ADV2 OTD	3,000 K	500 mA	C	12 kWh / 1,000 h
RLE 4x8 2000lm 840 MP ADV2 OTD	4,000 K	500 mA	C	12 kWh / 1,000 h
RLE 4x8 2000lm 850 MP ADV2 OTD	5,000 K	500 mA	C	12 kWh / 1,000 h
RLE 4x8 2000lm 865 MP ADV2 OTD	6,500 K	500 mA	C	12 kWh / 1,000 h
RLE 4x16 4000lm				
RLE 4x16 4000lm 822 MP ADV2 OTD	2,200 K	500 mA	D	23 kWh / 1,000 h
RLE 4x16 4000lm 827 MP ADV2 OTD	2,700 K	500 mA	C	23 kWh / 1,000 h
RLE 4x16 4000lm 830 MP ADV2 OTD	3,000 K	500 mA	C	23 kWh / 1,000 h
RLE 4x16 4000lm 840 MP ADV2 OTD	4,000 K	500 mA	C	23 kWh / 1,000 h
RLE 4x16 4000lm 850 MP ADV2 OTD	5,000 K	500 mA	C	23 kWh / 1,000 h
RLE 4x16 4000lm 865 MP ADV2 OTD	6,500 K	500 mA	C	23 kWh / 1,000 h

Energy label and further information at www.tridonic.com in the certificates tab of the corresponding product page and at the EPREL data base <https://eprel.ec.europa.eu/>

2. Thermal details

2.1 tc point, ambient temperature and lifetime

The temperature at tp reference point is crucial for the light output and lifetime of a LED product.

For RLE a tp temperature of 75 °C has to be complied in order to achieve an optimum between heat sink requirements, light output and lifetime.

Compliance with the maximum permissible reference temperature at the tc point must be checked under operating conditions in a thermally stable state. The maximum value must be determined under worst-case conditions for the relevant application.

The tc and tp temperature of LED modules from Tridonic are measured at the same reference point.

2.2 Storage and humidity

Storage temperature	-40 ... +80 °C
---------------------	----------------

Operation only in non condensing environment.

Humidity during processing of the module should be between 0 to 70 %.

2.3 Thermal design and heat sink

The rated life of LED products depends to a large extent on the temperature. If the permissible temperature limits are exceeded, the life of the RLE will be greatly reduced or the RLE may be destroyed.

2.4 Heat sink values

RLE 4x8 2000lm ADV2 OTD

ta	tp	Forward current	R _{th, hs-a}	Cooling area
25 °C	75 °C	350 mA	13.75 K/W	48 cm ²
25 °C	75 °C	500 mA	9.14 K/W	73 cm ²

60 °C	75 °C	700 mA	0.91 K/W	735 cm ²

Notes

The actual cooling surface can differ because of the material, the structural shape, outside influences and the installation situation. Depending on the heat sink a heat conducting paste or heat conducting film might be necessary to keep the specified tp temperature.

3. Installation / wiring

3.1 Electrical supply/choice of LED driver

RLE modules from Tridonic are not protected against overvoltages, overcurrents, overloads or short-circuit currents. Safe and reliable operation can only be guaranteed in conjunction with a LED driver which complies with the relevant standards. The use of LED driver from Tridonic in combination with RLE modules guarantees the necessary protection for safe and reliable operation.

If a LED driver other than Tridonic is used, it must provide the following protection:

- Short-circuit protection
- Overload protection
- Overtemperature protection

RLE modules must be supplied by a constant current LED driver. Operation with a constant voltage LED driver will lead to an irreversible damage of the module.

If RLE modules are wired in parallel and a wire breaks or a complete module fails then the current passing through the other module increases. This may reduce its life considerably. In addition there can be slight differences in light output caused by tolerances.

RLE modules can be operated either from SELV LED drivers or from LED drivers with LV output voltage.

RLE modules are basic insulated up to 410 V if mounted with M3 screws or 570 V if mounted with M3 screws and lens (e.g. LEDIL Stradella 16) against ground and can be mounted directly on earthed metal parts of the luminaire. If the max. output voltage of the LED driver (also against earth) is above 410 V / 570 V, an additional insulation between LED module and heat sink is required (for example by insulated thermal pads) or by a suitable luminaire construction. At voltages > 60 V an additional protection against direct touch (test finger) to the light emitting side of the module has to be guaranteed. This is typically achieved by means of a non removable light distributor over the module.

3.2 Integrated protection

The basic protection level consists of protection against reverse polarity and an NTC for overtemperature protection of the module.

The NTC is designed to work with the LCO EXC3 drivers supporting NTC functionality (for more details see LED driver data sheet).

NTC type: 100kΩ / 4100K

3.3 Wiring

3.4 Wiring examples

3.5 Wiring type and cross section

The wiring can be solid or stranded wires with a cross section of 0.2 to 0.75 mm². For the push-wire connection you have to strip the insulation (7–9 mm).

Inserting stranded wires / removing wires by lightly pressing on the push button.

3.6 Mounting instruction

None of the components of the RLE (substrate, LED, electronic components etc.) may be exposed to tensile or compressive stresses.

Max. torque for fixing: 0.5 Nm.

The LED modules are mounted onto a heat sink with M3 screws per module.

Chemical substance may harm the LED module. Chemical reactions could lead to colour shift, reduced luminous flux or a total failure of the module caused by corrosion of electrical connections.

Materials which are used in LED applications (e.g. sealings, adhesives) must not produce dissolver gas. They must not be condensation curing based, acetate curing based or contain sulfur, chlorine or phthalate.

Avoid corrosive atmosphere during usage and storage.

3.7 EOS/ESD safety guidelines

The device / module contains components that are sensitive to electrostatic discharge and may only be installed in the factory and on site if appropriate EOS/ESD protection measures have been taken. No special measures need be taken for devices/modules with enclosed casings (contact with the pc board not possible), just normal installation practice. Please note the requirements set out in the document EOS / ESD guidelines (Guideline_EOS_ESD.pdf) at: <http://www.tridonic.com/esd-protection>

4. Lifetime

4.1 Lifetime, lumen maintenance and failure rate

The light output of an LED module decreases over the lifetime, this is characterized with the L value.

L70 means that the LED module will give 70 % of its initial luminous flux. This value is always related to the number of operation hours and therefore defines the lifetime of an LED module.

As the L value is a statistical value and the lumen maintenance may vary over the delivered LED modules.

The B value defines the amount of modules which are below the specific L value, e.g. L70B10 means 10 % of the LED modules are below 70 % of the initial luminous flux, respectively 90 % will be above 70 % of the initial value. In addition the percentage of failed modules (fatal failure) is characterized by the C value.

The F value is the combination of the B and C value. That means for F degradation and complete failures are considered, e.g. L70F10 means 10 % of the LED modules may fail or be below 70 % of the initial luminous flux.

4.2 Lumen maintenance

Typ. forward current	tp temperature	L90 / B10	L90 / B50	L80 / B10	L80 / B50	L70 / B10	L70 / B50

5.2 Forward voltage vs. tc temperature

The diagrams are based on statistic values.
The real values can be different.

6. Photometric characteristics

6.1 Coordinates and tolerances according to CIE 1931

The specified colour coordinates are integral measured by current impulse of 500 mA and a duration of 100 ms.

The ambient temperature of the measurement is $t_a = 25^\circ\text{C}$.

The measurement tolerance of the colour coordinates are ± 0.01 .

**6.2 Light distribution**

RLE G1 OTD modules are designed to be compatible with 50 x 50 mm lens arrays with 25.4 mm pitch distance. This allows multiple light distributions.

The colour temperature is measured integral over the complete module. The single LED light points can have deviations in the colour coordinates within MacAdam 4.

6.4 Relative luminous flux vs. operating current

The diagrams are based on statistic values.
The real values can be different.
