Legend

- (1) 1 TB = 10^{12} bytes.
- (2) Sequential Performance is based on FIO on Linux, 128 K, with QD=32, 1 worker.
- (3) Random Performance is based on FIO on Linux, 4 K data size, QD=32, 1 worker.
- (4) Latency is measured with random workloads based on FIO on Linux, 4 KB data size, QD=1, 1 worker.
- (5) Sequential performance is based on FIO (Flexible I/O Tester - an open source tool used to measure the performance of input/output (I/O) operations for disk drives and storage systems under various test scenarios) on Linux, 128 K, with QD=32, 1 worker.
- (6) Power consumption (Typical) is measured during the sequential read/write and random read/write operations performed by iometer with the conditions described in (2)(3).
- (7) The results of DWPD are obtained in compliance with JESD219A Standards.
- (8) 1 PB = 1000 TB, 1 TB = 10^{12} bytes.
- (9) UBER (Uncorrectable Bit Error Rate) – a measure of data storage reliability, indicating the number of uncorrectable bit errors per amount of data read. This value shows how often errors may occur that cannot be corrected using internal ECC (Error Correction Code) mechanisms.
- (10) Please note that a lower MTBF should be expected for higher capacity drives, and we apply the lowest MTBF for all capacities.
- (11) We warrant that each Product manufactured and delivered by Wilk Elektronik SA will comply with the specifications for five (5) years from the date of delivery or until the total number of stored terabytes specified in the S.M.A.R.T. attribute is exceeded, whichever occurs first.
