Trademark Information

Antaira is a registered trademark of Antaira Technologies, LLC. Microsoft Windows and the Windows logo are the trademarks of Microsoft Corp. All other brand and product names are trademarks or registered trademarks of their respective owners.

Disclaimer

Antaira Technologies, LLC. provides this manual without warranty of any kind, expressed, or implied including but not limited to the implied warranties of merchantability and fitness for a particular purpose. Antaira Technologies, LLC. may make improvements and/or changes to the product and/or specifications of the product described in this manual without prior notice. Antaira Technologies, LLC. will not be liable for any technical inaccuracies or typographical errors found in this guide. Changes are periodically made to the information contained herein and will be incorporated into later versions of the manual. The information contained is subject to change without prior notice.

FCC Notice

This equipment has been tested and found to comply with the limits for a Class-A digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy. It may cause harmful interference to radio communications if the equipment is not installed and used in accordance with the instructions. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Caution: Any changes or modifications not expressly approved by the grantee of this device could void the user's authority to operate the equipment.

CE Mark Warning

This is a Class-A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

Industrial Ethernet Media Converters

User Manual

This manual supports the following models:

- IMC-C1000-XX
- IMC-C1000-XX-T

Please check our website (<u>www.antaira.com</u>) for any updated manual or contact us by e-mail (<u>support@antaira.com</u>).

1. Overview

Antaira Technologies' **IMC-C1000-XX series** is a compact IP30 rated gigabit Ethernet-to-Fiber media converter featuring a 10/100/1000TX Ethernet port and a fixed fiber interface supporting ST and SC connectors depending on model. There are models that support Multimode and Single-Mode to support applications with a variety of fiber distances. It is perfectly designed to fulfill industrial applications that require distance extension and high bandwidth capabilities.

The IMC-C1000-XX series has a built-in "Link Fault Pass Through" (LFP) and "Far End Fault" (FEF) function with 12~48VDC redundant power inputs with reverse polarity and overload current protection. This product series supports DIN-rail as well as wall mountable orientations and provides operating temperature range models in STD: -10°C to 70°C and EOT: -40°C to 80°C

1.1 Key Features

- System Interface/Performance
 - RJ-45 ports support the auto MDI function
 - Embedded 1*10/100/1000Tx and 1*1000x fixed fiber port
 - Store-and-forward switching architecture
 - 8k MAC Address Table
 - Supports 10kbytes Jumbo Frame
 - 1Mbits memory buffer
- Power Input
 - DC 12~48V redundant power with a 4-pin removal terminal block
 - Max. current 0.18A
 - The power input specification is complied with the requirements of SELV (Safety Extra Low Voltage), and the power supply should be complied with UL 61010-1 & UL 61010-2-201.
- Operating Temperature
 - Standard operating temperature model: -10°C ~ 70°C
 - Extended operating temperature model (-T): -40°C ~ 80°C
- Case/Installation
 - IP-30 protection
 - Installation in a Pollution Degree 2 industrial environment
 - DIN-Rail and wall mount design

1.2 Package Contents

- 1 Quick Installation Guide
- 1 IMC-C1000-XX series Industrial Gigabit Media Converter
- 1 Wall mounting bracket set with screws
- 1 DC cable 18 AWG & DC jack 5.5x2.1mm

1.3 Safety Precaution

Attention

If the DC voltage is supplied by an external circuit, please use a protection device on the power supply input. Supply by UL Listed industrial use power. The industrial media converter's hardware specs, ports, cabling information, and wiring installation will be described within this user manual.

Warning Labels

The caution label means that you should check the certain information on the user manual when working with the device. (Shown in *Figure 1*)

Figure 1: Caution Label

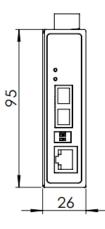

2. Hardware Description

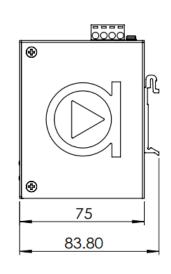

2.1 Physical Dimensions

Figure 2.1, below, shows the physical dimensions of Antaira Technologies' IMC-C1000-XX series: 10/100/1000Tx to 1000x compact industrial gigabit Ethernet media converter.

(W x D x H) is **26mm x 95mm x 75mm**

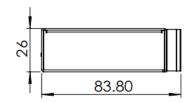

Figure 2.1 Physical Dimensions

2.2 Front Panel

The front panel of the IMC-C1000-XX series can be seen below (Figure 2.2).

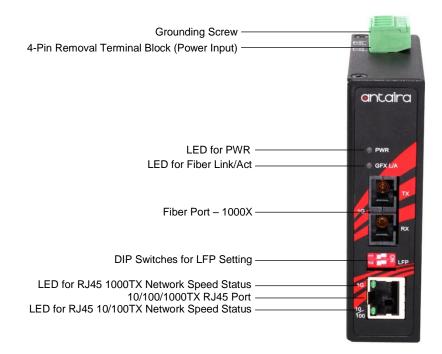

Figure 2.2 Front Panel

2.3 Top View

Figure 2.3, below, shows the top panel of the IMC-C1000-XX series media converter that is equipped with one 4-pin removal terminal block connector for dual DC power inputs (12~48VDC).

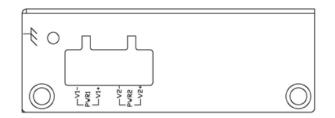

Figure 2.3 Top Panel View

2.4 LED Indicators

There are LED light indicators located on the front panel of the industrial Ethernet media converter that displays the power and network status. Each LED indicator has a different color and has its own specific meaning, see below in *Table 2.1*.

LED	Color	Description	
PWR	Green	On	Power input 1 or 2 is active
		Off	Power input 1 and 2 are inactive
	Green	On	Connected to network at 1000Mbps
GFX L/A		Flashing	Networking is active
		Off	Not connected to network
		On	Linked to network at 1000Mbps
RJ45 Port (Upper LED)		Flashing	Networking is active
(Opper LED)	Green	Off	Not connected to network
		On	Linked to network at 10/100Mbps
RJ45 Port (Lower LED)		Flashing	Networking is active
	Green	Off	Not connected to network

Table 2.1

LED Indicators

NOTE: "PWR" is the abbreviation for "Power", "GFX" is for "Gigabit Fixed Fiber port", and "L/A" is for "Link/Activity".

2.5 DIP-Switch Setting

Default setting:

There are 2 pins on DIP-switch on the front panel for setting LFP (Link Fault Pass) function, see the *Table 2.2* below for more details.

Illustration	DIP-Switch 1	DIP-Switch 2	Function Description
ON 1 2	ON	OFF	LFP function Enable
ON 1 2	OFF	OFF	LFP function Disable

Caution: If changing the current DIP-switch setting, the device should be powered off and then powered on again to make the setting effective.

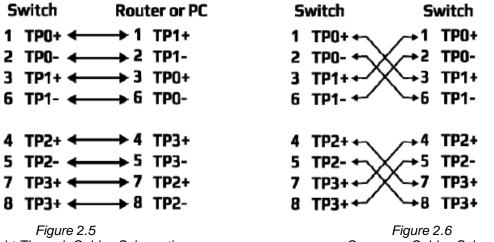

2.6 Ethernet Ports

RJ-45 Ports

RJ-45 Ports (Auto MDI/MDIX): The RJ-45 port is auto-sensing for 10/100Base-Tx or 1000Base-Tx device connections. Auto MDI/MDIX means that the media converter can connect to another switch or workstation without changing the straight-through or crossover cabling. See the figures shown below for the straight-through and crossover cabling schematics.

Pin	Label	_
1	TP0+	12345678
2	TPO-	
3	TP1+	
4	TP2+	
5	TP2-	
6	TP1-	
7	TP3+	
8	TP3-	

Figure 2.4: RJ-45 Ethernet Port Pin

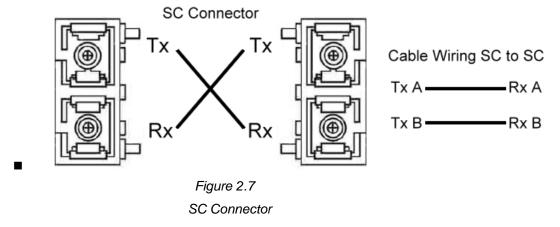

Straight-Through Cables Schematic

2.7 Cabling

- Twisted-pair segments can be connected with an Unshielded Twisted Pair (UTP) or Shielded Twisted Pair (STP) cable. The cable between the equipment and the link partner (media converter, switch, hub, workstation, etc.) must be less than 100 meters (328 ft.) long.
- Single-mode connector types have to use 9/125µm single-mode fiber cable, while multi-mode connector types have to use 62.5/125µm multi-mode fiber cable.

The fiber port of SC type connector can work in multi-mode or single-mode. When connecting the fiber port to another one, please follow the figure on the following page (Figure 2.7) to connect accordingly. Wrong connection will cause the port to work abnormally.

Caution: This is a Class 1 Laser/LED product that complies with IEC 60825-1. Don't stare into the Laser/LED Beam.

2.8 Wiring the Power Inputs

Please follow the steps below to insert the power wire.

1. Insert the positive and negative wires into the PWR1 (V1+, V1-) and PWR2 (V2+, V2-) contacts on the terminal block connector as shown below in *Figure 2.8*.

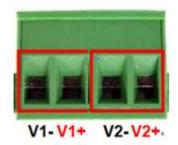

Figure 2.8 Power Terminal Block

2. Tighten the wire-clamp screws to prevent wires from loosening as shown below in Figure 2.9.

Figure 2.9 Power Terminal Block

Caution: Only use copper conductors, 70/80°C, tighten to 5 in-lbs (0.56 Nm). The wire gauge for the terminal block should range between 18~20 AWG.

Grounding Note

Grounding and wire routing help limit the effects of noise due to electromagnetic interference (EMI). Run the ground connection from the ground screw to the grounding surface prior to connecting devices. The grounding screw symbol is shown blow in *Figure 2.10*.

Figure 2.10 Grounding screw

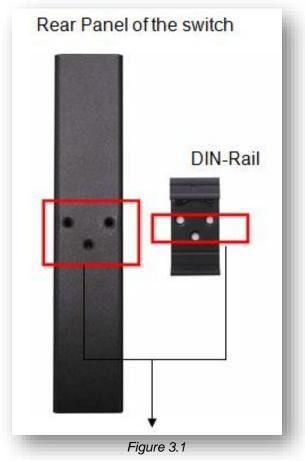

Caution: Using a shielded cable achieves better electromagnetic compatibility.

3. Mounting Installation

3.1 DIN-Rail Mounting

The DIN-Rail is pre-installed on the industrial Ethernet media converter from the factory. If the DIN-Rail is not on the industrial Ethernet media converter, please refer to *Figure 3.1* to learn how to install the DIN-Rail on the media converter.

The Rear Side of the Media Converter and DIN-Rail Bracket

Follow the steps below to learn how to hang the industrial Ethernet media converter.

1. Use the screws to install the DIN-Rail bracket on the rear side of the industrial Ethernet media converter.

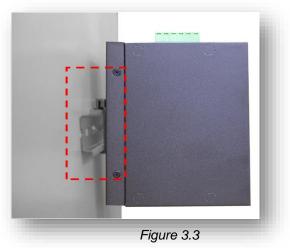

Caution: The torque for tightening the screws on the device is 3.5 in-lbs.

- 2. To remove the DIN-Rail bracket, do the opposite from step 1.
- 3. After the DIN-Rail bracket is installed on the rear side of the media converter, insert the top of the DIN-Rail on to the track as shown below in *Figure 3.2*.

Figure 3.2 Insert on the DIN-Rail

4. Lightly pull down the bracket on to the rail as shown below in *Figure 3.3*.

Secure on to the DIN-Rail

5. Check if the bracket is mounted tightly on the rail.

6. To remove the industrial Ethernet media converter from the rail, do the opposite from the above steps.

3.2 Wall Mounting

Follow the steps below to mount the industrial Ethernet media converter using the wall mounting bracket as shown below in *Figure 3.4*.

Caution: "Wall" means industrial control panel wall.

- 1. Remove the DIN-Rail bracket from the industrial media converter by loosening the screws.
- 2. Place the wall mounting brackets on the top and bottom of the industrial media converter.
- 3. Use the screws to screw the wall mounting bracket on the industrial media converter.

Caution: The torque for tightening the screws on the device is 3.5 in-lbs.

- 4. Use the hook holes at the corners of the wall mounting bracket to hang the industrial Ethernet media converter on the wall.
- 5. To remove the wall mount bracket, do the opposite from the steps above.

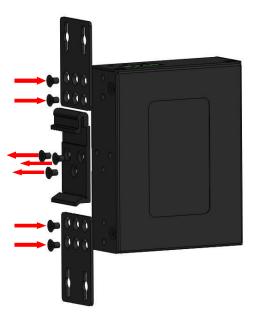

Figure 3.4 Remove DIN-Rail Bracket

Below, in Figure 3.5, are the dimensions of the wall mounting bracket.

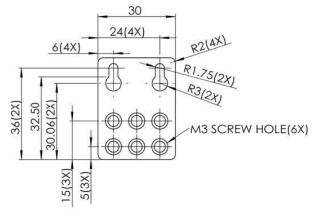

Figure 3.5 Wall Mounting Bracket Dimensions

4. Hardware Installation

4.1 Installation Steps

This section will explain how to install Antaira Technologies' IMC-C1000-XX series.

- 1. This device is intended for indoor use and at altitudes up to 2000 meters.
- 2. This device is intended to be installed in an industrial control enclosure and panel.

Installation Steps

- 1. Unpack the industrial media converter from the original packing box.
- 2. Check if the DIN-Rail bracket is screwed on the industrial media converter.
 - a. If the DIN-Rail is not screwed on the industrial media converter, please refer to the **DIN-Rail Mounting** section for DIN-Rail installation.
 - b. For wall mounting, please refer to the **Wall Mounting** section for wall mounting installation.
- 3. For DIN-Rail or wall mounting, please refer to the **Mounting Installation** section.
- 4. Power on the industrial media converter and then the power LED light will turn on.
 - a. For wiring power, please refer to the **Wiring the Power Inputs** section.
 - b. Please refer to the LED Indicators section for LED light indication.
- 5. Prepare the twisted-pair, straight-through category 5 cable for Ethernet connection.
- 6. Insert one side of the RJ-45 cable into the media converter's Ethernet port and on the other side into the networking device's Ethernet port, e.g. switch PC or server. The Ethernet port's (RJ-45) LED on the industrial media converter will turn on when the cable is connected to the networking device.
 - a. Please refer to the LED Indicators section for LED light indication information.
- 7. Insert one side of the fiber cable into the media converter's fiber port and on the other side into the networking device's fiber port, e.g. switch or server. The fiber port's LED on the industrial media converter will turn on when the cable is connected to the networking device.
 - a. Please refer to the LED Indicators section for LED light indication information.
- When all connections are set and the LED lights all show normal, the installation process is complete.

4.2 Maintenance and Service

- If the device requires servicing of any kind, the user is required to disconnect and remove it from its mounting. The initial installation should be done in a way that makes this as convenient as possible.
- Voltage/power lines should be properly insulated as well as other cables. Be careful when handling them so as to not trip over.
- Do not under any circumstance insert foreign objects of any kind into the heat dissipation holes located in the different faces of the device. This may not only harm the internal layout, but might cause harm to user as well.
- Do not under any circumstance open the device for any reason. Please contact your dealer for any repair needed or follow the instructions within the manual.
- Clean the device with dry soft cloth.

5. Network Application This segment provides an example of an industrial Ethernet media converter application

(Figure 5.1).

Figure 5.1 Industrial Gigabit Media Converter Application Example

6. Trouble Shooting

- Always verify the right power cord or adapter is being used. Never use a power supply or adapter with a non-compliant DC output voltage or it will burn the equipment.
- Select the proper UTP or STP cable in order to construct the network. Use an Unshielded Twisted-Pair (UTP) or Shield Twisted-Pair (STP) cable for RJ-45 connections: 100Ω Category 5e for 10/100/1000Mbps. Also be sure that the length of any twisted-pair connection does not exceed 100 meters (328 feet).
- **Diagnosing LED Indicators:** To assist in identifying problems, the media converter can be easily monitored with the LED indicators which help to identity if any problems exist.
 - Please refer to the LED Indicators section for LED light indication information.
- If the power indicator LED does not turn on when the power cord is plugged in, the user may have a problem with the power cord. Check for loose power connections, power losses, or surges at the power outlet.
 - Please contact Antaira for technical support if the problem cannot be resolved.
- If the industrial media converter LED indicators are normal and the connected cables are correct but the packets still cannot transmit, please check the system's Ethernet devices' configuration or status.

7. Technical Specifications

Table 7.1 has the technical specifications for Antaira Technologies' IMC-C1000-XX series:

	IEEE 802.3	10Base-T 10Mbit/s Ethernet
Standards	IEEE 802.3u	100Base-TX, Fast Ethernet
otandarus	IEEE 802.3ab	1000Base-TX Gigabit Ethernet
	IEEE 802.3z	1000Base-X Gigabit Fiber
	Protocol	CSMA/CD
Technology	Data Process	Store and Forward
	Flow Control	IEEE 802.3x back pressure flow control
Switch	Memory Buffer	1M bits
Properties	Jumbo Frame	10k bytes
ropentes	MAC Table Size	8k
	Ethernet (RJ45) Port	1*10/100/1000Tx auto negotiation speed, full/half duplex mode, and auto
		MDI/MDI-X connection
Denthaterfeet	Fiber Port	1*1000 SC/ST type connector
Port Interface		Multi-mode: 50/125um or 62.5/125um
		Single-mode: 9/125um or 10/125um
	Fiber Wavelength	Depends on fixed fiber modules
	DIP Switch	DIP Switch 1: LFP (Link Fault Pass) Enable/Disable

		Power (PWR): On / Off	
	LED Indicator	Fiber Port (GFX): Link / Act	
		Ethernet Port: Link / Act	
		10BaseT: 2-pair UTP/STP Cat.3,4,5 cable EIA/TIA-568 100-ohm (100m)	
	Network Cable	100BaseTX: 2-pair UTP/STP Cat.5 cable EIA/TIA-568 100-ohm (100m)	
		1000BaseTX: UTP/STP Cat. 5/5e cable EIA/TIA-568 100-oHm (100m)	
	Housing	Metal IP30 protection
