

Privacy filter 24" | 16:10

Product code: 51061

The privacy filter is applied to the monitor or notebook screen.
It aims to protect the displayed data.

About the product

Privacy filters are an excellent solution for mobile employees, people working in crowded public places for e.g. cafes, airports, but also for health care, public and financial institutions who are obliged to protect data due to the high confidentiality of information.

Qoltec's privacy filters are equipped with micro-shutter technology to ensure the privacy of displayed information so that the content of the monitor is visible only to the person directly in front of the screen. Looking from the side they can only see a darkened screen.

The highest quality world-class LG material was used.

Filters provide a clear and clean image and safe work, narrowing the view angle to 60 degrees of what is shown on the screen.

The privacy filter is designed for monitors with a 24" diagonal in 16:10 format. It is equipped with an anti-reflective coating that reduces the emission of blue light which translates into greater comfort of work.

Qoltec's privacy filter can be installed in two ways:

1. Permanent installation is enabled by transparent self-adhesive strips that are mounted directly to the screen.
2. Temporary mounting is enabled by transparent guides which are mounted on the monitor frame. This option allows easy removal of the filter.

Make sure that confidential data is not stolen from your computer. Guarantee yourself and your employee's comfort and safety at work.

Technical data

Diagonal screen	24"
Screen proportions	16:10
