

433.92MHz OOK Superhet Receiver Module

It's an OOK Superhet Data Receiver Module.

Very Low Cost version. The main features are the following :

- 1) RF Sensibility -113dBm.
- 2) Supply Voltage from 2.0Volt to 5.5Volt
- 3) Fast Startup Time 3ms

The difference between the two versions is that the RCRX2 version does not have the pin 1.

Compliant with harmonics standards:

- EN 301 489-3 : V2.1.1
- EN 300 220-2 : V3.1.1

Typical application

Receiver Connection Guideline

- 1) The receiver module must be powered from a regulated voltage.
- 2) In proximity of the receiver module it is necessary to insert a ceramic decoupling capacitor (100nF).
- 3) The ground plane must be completely encircle the entire receiver in particular the area of the Antenna connection (we recommend a minimum of 40-50mm radius).
- 4) The 50ohm connection should be as short as possible.
- 5) For a pcb with 1.6mm thickness, the track "50ohm connection" must be 2.5mm, this track should be separated from the GND for 2mm.
- 6) On the opposite side of 50ohm connection should be a ground plane.
- 7) Keep the receiver module away from other components for more than 5mm.
- 8) Close to the 50ohm connection there must be no component at least for 5mm.
