FUNCTIONAL DESCRIPTION:

1.ON DELAY [A]

The Timer starts when both power (p) and signal (s) are applied .The relay is energized at the end of preset Timer (T) and remains on till power is removed.

2.CYCLIC OFF/ ON {OFF START (Sym,Asym)} [b]

T-ON and T-OFF can be same or different .The relay keeps on changing its status till the power is removed.

3.CYCLIC ON/OFF {ON START (Sym, Asym)} [E]

This function is quite similar to the function "b" but Initially he relay is ON for period T-ON after the power is applied.

4.SIGNAL ON/OFF [d]

The output relay is turned ON for preset Time (T) When ever the signal (S)is applied or removed .(Refer Note :2)

5.SIGNAL OFF DELAY [E]

Output relay become on when signal (S) is applied. The Timer duration (S) is removed .At the end of timer Duration (T) the output relay goes OFF. Signal (S) ,if Applied during the timer duration (S) will re -trigger The timer and the total duration will be extended.

6.INTERVAL [F]

When Signal (S) is applied ,The Timer Starts and the Output trelay is energized .The output relay be comes OFF at the end of timer duration (T).

7.SIGNAL OFF/ON [G]

When Signal (s) is applied or removed ,The relay changes . Its state after timer duration (T) (Refer Nots : 2)

8.ONE SHOT OUTPUT [H]

When Signal (s) is applied ,the timer duration (T) Starts. At the end of Timer duration (T), the relay gets energized for approximately 1 sec.(Refer Note:2)

1.For power -on operation the terminal B1 and A1 must.

2.In case of all modes except mode G a change in Signal (s) status during the Timing Duration (T),does not affect output status but resets timing and re-triggers timing.

3.Output de-energises when device enters PROGRAM MODE and starts new cycle after coming out of. PROGRAM MODE.

4.Loads which have current requirement 1mA,con only be used as Optional Load . For e.g Contactor coil ,AC Relay Coil, etc,

Functional Description

1.ON DELAY [0]

Timing commences when supply is present. R energizes at the end of the timing period.

2.CYCLIC OFF/ON {OFF Start, (Sym, Asym)} [1]

T-ON and T-OFF can be same or different. The relay (R) keeps on changing its status until power is removed.

3.CYCLIC ON/OFF {On Start, (Sym, Asym)} [2]

This function is quite similar to the function '1' but initially the relay (R) is ON for period T-ON after the power is applied.

4.IMPULSE ON ENERGIZING [3]

After power ON, R energizes and timing starts. R de-energizes after timing is over.

5.ACCUMULATIVE DELAY ON SIGNAL [4]

Time commences as supply is present and switch B1 is open. Closing switch B1 pauses timing. Timing resumes when switch B1 is opened again. R energizes at the end of timing.

6. ACCUMULATIVE DELAY ON INVERTED SIGNAL [5]

Time commences as supply is present and switch B1 is closed. Opening switch B1 pauses timing. Timing resumes when switch B1 is closed again. R energizes at end of timing.

7. ACCUMULATIVE IMPULSE ON SIGNAL [6]

When supply is ON, R energizes. When switch B1 is closed timing is suspended and remains suspended till switch B1 is opened again. Interrupting supply resets timer.

8.SIGNAL ON DELAY [7]

Permanent supply required. Timing starts when switch B1 is closed. R energizes at end of timing period and de-energizes when B1 is opened.

9.INVERTED SIGNAL ON DELAY [8]

Timing will commence when supply is present and switch B1 is open. R energizes after timing. If B1 is closed during timing period, timing resets to the beginning of cycle.

10.SIGNAL OFF DELAY [9]

Permanent supply is required. R energizes when switch B1 is closed. Timing commences after S is opened and then the relay de-energizes.

11.IMPULSE ON/OFF [α]

Permanent supply is required. R energizes for the timing period when B1 is opened or closed. When timing commences, changing state of B1 does not affect R but resets timer.

12.SIGNAL OFF/ON [B]

When switch B1 is closed or opened for preset time 'T,' the relay changes its state after time duration T.

13.LEADING EDGE IMPULSE1 [χ]

A permanent supply is needed. When B1 is closed, output relay energizes until timing irrespective of any further action of B1.

14.LEADING EDGE IMPULSE 2 [Δ]

Permanent supply is required. when switch B1 is closed, and remains closed output relay energizes until timing is over. If B1 is opened during timing, R resets.

15.TRAILING EDGE IMPULSE 1 [ε]

Permanent supply required. when B1 is opened, R energizes and de-energizes when timing is over. If B1 is closed during timing R resets.

16.TRAILING EDGE IMPULSE 2 [ϕ]

Permanent supply is required. When switch B1 is opened, R energizes and will de-energize when timing is over. If B1 is pulsed during timing period it Will have no effect on R.

17.DELAYED IMPULSE [Γ]

when switch B1 is closed, T_{OFF} starts. Relay energizes at the end of T_{OFF} period. Then, T_{ON} starts irrespective of signal level and relay de-energize at the end of T_{ON} period.

18. INVERTED SIGNAL ON DELAY-TYPE 2 [H]

Timing starts only upon signal 'B1' transition high to low. During timing or after completion of Time (i.e. relay on), any signal transition is ignored. To reset the timer supply has to be interrupted.
