

VPP50 Vacuum Pickup System

The VPP50 Vacuum Pickup System is designed for safely and efficiently picking up and placing delicate lightweight components with ease. Unlike conventional tweezers, the use of a rubber suction cup prevents possible accidental damage or contamination to the component during the lifting and positioning process.

Its simple pneumatic only control and easy to use finger actuated design allows the system to be used in workspace environments, where electrical supply is unavailable or not permitted.

Features

- Simple setup and operation
- Adjustable vacuum control
