DDR 2-Amp Source / Sink V_{TT} Termination Regulator

The NCP/NCV51199 is a linear regulator designed to supply a regulated V_{TT} termination voltage for DDR-2 and DDR-3 memory applications. The regulator is capable of actively sourcing and sinking ± 2 A peak currents for DDR-2, and DDR-3 up to ± 1.5 A while regulating the V_{TT} output voltage to within ± 10 mV. The output termination voltage is regulated to track $V_{DDQ} / 2$ by two external voltage divider resistors connected to the PV_{CC} , GND, and V_{REF} pins.

The NCP/NCV51199 incorporates a high-speed differential amplifier to provide ultra-fast response to line and load transients. Other features include source/sink current limiting, soft-start and on-chip thermal shutdown protection.

Features

- Supports DDR-2 V_{TT} Termination to ± 2 A, DDR-3 to ± 1.5 A (peak)

PIN FUNCTION DESCRIPTION

Pin No.	Pin Name	Description
1	PV_{CC}	Input voltage which supplies current to the output pin. C_{IN} = 470 μ F with low ESR.
2	GND	Common Ground
3	V_{REF}	Buffered reference voltage input equal to $\frac{1}{2}$ of V_{DDQ} and active low shutdown pin. An external resistor divider dividing down the PV_{CC} voltage creates the regulated output voltage. Pulling the pin to ground (0.15 V maximum) turns the device off.
4	V_{TT}	Regulator output voltage capable of sourcing and sinking current while regulating the output rail. C_{OUT} = 1000 μ F + 10 μ F ceramic with low ESR.
5	NC	True No Connect
6	V_{CC}	The V_{CC} pin is a 5 V input pin that provides internal bias to the controller. PV_{CC} should always be kept lower or equal to V_{CC} .
7	NC	True No Connect
8	NC	True No Connect
EP	Thermal Pad	Pad for thermal connection. The exposed pad must be connected to the ground plane using multiple vias for maximum power dissipation performance.
